Pathogen-Host Interactions: Antigenic Variation v. Somatic Adaptations Ellen Hsu,Louis Du Pasquier,2015-11-04 This volume provides in depth reviews of model systems that exemplify the arms race in host pathogen interactions Somatic adaptations are responsible for the individualization of biological responses to the environment and the continual struggle between host immune systems and invading pathogens has given rise to corresponding processes that produce molecular variation Whether in mollusks or human beings various host somatic mechanisms have evolved independently providing responses to counter rapidly changing pathogens The pathways they utilize can include non heritable changes involving RNA and post translational modifications or changes that produce somatic DNA recombination and mutation For infectious organisms such as protozoans and flatworms antigenic variation is central to their survival strategy Evolving the ability to evade the host immune system not only increases their chances of survival but is also necessary for successful re infection within the host population Ecology of diseases transmitted by mosquitoes to wildlife Rafael Gutiérrez-López,James G. Logan,Josué Martínez-de la Puente,2023-08-14 Mosquitoes transmit many of the pathogens that cause zoonotic diseases from

wildlife and livestock to people with devastating consequences for public health The factors affecting the ecology and evolution of the transmission dynamics of these mosquito borne pathogens can be revealed using multidisciplinary research approaches This 7th volume of the ECVD series focuses on the ecological factors that determine the transmission dynamics of mosquito borne pathogens naturally circulating between animals of different taxa and their importance for human health The authors revise the current knowledge on the pathogens that affect wildlife including those maintained in captivity as well as the use of cutting edge techniques for the identification of potential vectors of these pathogens In addition this volume explores the role of factors related to global change including changes in landscape use deforestation and urbanization as major drivers of the distribution of mosquito vectors and the dynamics of pathogen transmission Finally updated information on the approaches used to identify and control mosquito borne diseases is presented with a particular focus on those affecting humans In summary this book provides an updated review of the different mosquito borne pathogens affecting animals and their public health relevance
