 try to avoid or at least minimize the amount of meat and animal products they eat This way instead of getting their nutrients
 from animals they get their nutrients from raw plants Plant based diets are becoming more popular in recent years because
 of environmental concerns and health benefits that come with them Biological differences between a vegetarian and
 nonvegetarian diet include how much processed food a person typically eats when compared to the amount eaten by those
 who eat meat The Centers for Disease Control and Prevention CDC reported that 70 1% of adults aged 18 65 consume at
 least a serving each day of refined grains compared to 49 6% of people who have a diet primarily composed of vegetables
 fruits seafood or lean meat On average vegetarians consume more fruits and vegetables than meat eaters however this is
 mostly because they tend to eat less meat compared to non vegetarians the average American consumes 95 grams of lean
 meats versus 35 grams of fruits and vegetables per day The average American take twice as much sugar as the average
 person who avoids animal products while the amount consumed by vegetarians is almost identical This book covers Breakfast
 recipes Lunch recipes Dinner recipes Snacks recipes Dessert recipes And much more For starters it s important to note that

there are many different types of plant based diets The most popular type includes any food that comes from plants fruits vegetables legumes but excludes meat and animal byproducts such as dairy or eggs Some people choose a vegan diet which involves completely cutting out all animal products from their diet Other people simply choose to strategically remove animal products from their diet for health reasons And some people still choose to use dairy or eggs in moderation
