**Freeze-Drying of Pharmaceutical and Food Products** Tse-Chao Hua, Bao-Lin Liu, Haimei Zhang, 2010-07-30 Freeze drying is an important preservation technique for heat sensitive pharmaceuticals and foods. Products are first frozen then dried in a vacuum at low temperature by sublimation and desorption rather than by the application of heat. The resulting items can be stored at room temperature for long periods. This informative text addresses both principles and practice in this area. The first chapter introduces freeze drying. The authors then review the fundamentals of the technique: heat mass transfer, analyses, modelling of the drying process and the equipment employed. Further chapters focus on freeze drying of food, freeze drying of pharmaceuticals and the protective agents and additives applied. The final chapter covers the important subjects of disinfection, sterilization and process validation. Freeze drying of pharmaceutical and food products is an essential reference for food, pharmaceutical and refrigeration engineers and scientists with an interest in preservation techniques. It will also be of use to students in these fields. Addresses the principles and practices used in this important preservation technique. Explains the fundamentals of heat mass transfer analysis, modelling and the equipment used. Discusses the importance of disinfection, sterilization and process validation. *Structure-Property Relationships of Polymeric Solids* Anne Hiltner, 2012-12-06 This book contains a collection of original research papers which were presented in honor of the Bordon Award recipient Professor Eric Baer on the occasion of the 55th Meeting of the American Chemical Society, Atlanta, Georgia, March 1981. The contributors are present or former colleagues and students who have worked with him in the Department of Macromolecular Science at Case Institute of Technology of Case Western Reserve University. Throughout his work, Eric Baer has attempted to find the relationships of solid state structure and hierarchy to the resultant properties from which specific functions are derived. Although he has studied many seemingly unrelated subjects from irreversible deformation mechanics and yield processes in amorphous polymeric solids to structural organization and mechanical function of tendon, his unique goal has been to develop models from the real structure that would allow a quantitative description of properties. Today, this area of microscience is rapidly expanding as new and sophisticated applications of polymeric materials with multifunctional properties are emerging from our understanding and control of the solid state. The wide ranging ideas and the originality of Professor Baer's contributions have stimulated many new concepts which are now widely accepted in the field of high polymers. The contributions to this volume represent many of the areas which he has explored. *A Guide to Materials Characterization and Chemical Analysis* John P. Sibiak, 1988 *Latent Heat-Based Thermal Energy Storage Systems* Amritanshu Shukla, Atul Sharma, Pascal Henry Biwole, 2020-09-27 In light of increasing human-induced global climate change, there is a greater need for clean energy resources and zero carbon projects. This new volume offers up-to-date coverage of the fundamentals as well as recent advancements in energy efficient thermal energy storage materials, their characterization and technological applications. Thermal energy storage (TES) systems offer very high energy savings for many of our day-to-day

day applications and could be a strong component for enhancing the usage of renewable clean energy based devices Because of its beneficial environmental impact this technology has received wide attention in the recent past and dedicated research efforts have led to the development of novel materials as well to innovative applications in very many fields ranging from buildings to textile healthcare to agriculture space to automobiles This book offers a valuable and informed systematic treatment of latent heat based thermal energy storage systems covering current energy research and important developmental work *Proceedings of the Ninth International Symposium on Cyclodextrins* Juan José Torres

Labandeira, José Luis Vila-Jato, 2012-12-06 This volume contains the proceedings of the Ninth International Symposium on Cyclodextrins held in Santiago de Compostela Spain May 31 June 3 1998 The papers collected represent a summary of the last two years achievements in the application of cyclodextrins in such diverse fields as pharmaceuticals biotechnology textiles chromatography and environmental sciences Highlights Chiral selection of chemicals nuclear waste management cyclodextrins in nasal drug delivery cyclodextrins in pulmonary drug delivery cyclodextrins as pharmaceutical excipients pharmacokinetics stabilization of drugs by cyclodextrins structural characterization of cyclodextrin complexes by nuclear magnetic resonance and molecular modeling artificial receptors large cyclodextrins cyclodextrins as enzyme models new cyclodextrin derivatives and potentials Audience This book will be of interest to researchers whose work involves biotechnology pharmaceuticals food and chemicals and chromatographic methods as well as fundamental cyclodextrin research

Food Structure J. M. V. Blanshard, J. R. Mitchell, 2016-07-29 Food Structure Its Creation and Evaluation reviews research and major developments with regard to the role of ingredients in building food structures Emphasis is on homogeneous and heterogeneous multicomponent systems their molecular interactions the macroscopic physics of their mechanical properties and the variety of techniques and strategies necessary to evaluate their properties if they are to be acceptable to the consumer This book is comprised of 26 chapters and begins by discussing the relevance of food structure from a dental clinical perspective The next chapter describes a hierarchy of gel structures that may be used to model the complex molecular networks formed by the protein and or polysaccharide components within the food system including simple single component networks binary networks or mixed gels and composite or filled gels The reader is then introduced to the gel structure of food biopolymers the structure and stability of emulsions the polymer water relationship and its importance for food structure and the fracture properties of polymers Dry spinning of milk proteins is also considered along with structured fat and sugar systems food crispness and texture This monograph will be of interest to food scientists sensory scientists nutritionists rheologists physicists and chemists **Thermal Analysis of Polymers** Joseph D. Menczel, R. Bruce Prime, 2014-07-09 Presents a solid introduction to thermal analysis methods instrumentation calibration and application along with the necessary theoretical background Useful to chemists physicists materials scientists and engineers who are new to thermal analysis techniques and to existing users of thermal analysis who wish expand their experience to new

techniques and applications Topics covered include Differential Scanning Calorimetry and Differential Thermal Analysis DSC DTA Thermogravimetry Thermomechanical Analysis and Dilatometry Dynamic Mechanical Analysis Micro Thermal Analysis Hot Stage Microscopy and Instrumentation Written by experts in the various areas of thermal analysis Relevant and detailed experiments and examples follow each chapter      **Specification for Direct Burial Telephone Cable** United States. Rural Electrification Administration,1978      **Effects of experimental variables in quantitative differential** Adrianus August van Dooren,19??      *REA Bulletin* ,1952
