Reconnection Betty Jean Craige, 2010-11-01 An openly polemical work Reconnection seeks a way of returning the humanities to their place at the center of human life For the past three hundred years to study the humanities has implied an isolation from politics science and society Literary studies in particular have often fallen prey to this isolation by viewing novels plays and poems as impassive verbal icons as texts to be explicated without reference to political context or social significance Seeking a way of ending this self imposed exile of the humanities from the turmoil of social issues and concerns Betty Jean Craige looks to the contextual nondisciplinary thought that began to take hold in academia during the 1960s a development that echoed the rising political awareness brought to the universities by the Vietnam War the civil rights movement and women s liberation Recently this emergent openness in the university has come under attack by conservative critics who have sought to roll back the movement for nontraditional inquiry in academia and to reassert the dominance of hierarchical canonical thought By tracing the ideological history of literary studies Craige shows that this reactionary goal of reimposing canonical thought is in time doomed to failure the age of the discipline is over In its place Craige calls for the creation of a holistic system of learning that will emphasize interdisciplinary and nondisciplinary research reconnecting literary studies with history and philosophy with science and politics restoring literature itself to a central place in our intellectual discourse and social debate

Magnetic Reconnection Walter Gonzalez, Eugene Parker, 2016-02-22 This book provides an overview of recent research highlights in the main areas of application of magnetic reconnection MR including planetary solar and magnetospheric physics and astrophysics It describes how research on magnetic reconnection especially concerning the Earth s magnetosphere has grown extensively due to dedicated observations from major satellite missions such as Cluster Double Star and Themis The accumulated observations from these missions are being supplemented by many theoretical and modelling efforts for which large scale computer facilities are successfully being used and the theoretical advances are also covered in detail Opening with an introductory discussion of some fundamental issues related to magnetic reconnection subsequent chapters address topics including collisionless magnetic reconnection MHD structures in 3D reconnection energy conversion processes fast reconnection mediated by plasmoids rapid reconnection and magnetic field topology Further chapters consider specific areas of application such as magnetospheric dayside and tail reconnection comparative reconnection in planetary systems and reconnection in astrophysical systems The book offers insight into discussions about fundamental concepts and key aspects of MR access to the full set of applications of MR as presently known in space physics and in astrophysics and an introduction to a new related area of study dealing with the annihilation of quantum magnetic fluxes and its implications in the study on neutron star activity The book is aimed primarily at students entering the field but will also serve as a useful reference text for established scientists and senior researchers
