

Recrystallization Pre-Lab

Introduction:

The purpose of this experiment is to recrystallize phenanthrene and benzoic acid to purify the compounds. A compound is dissolved in hot solvent in recrystallization which in this experiment, phenanthrene is dissolved in a solvent pair of water and ethanol, and benzoic acid is dissolved in hexane. The solution will be cooled once completely mixed with these solvents. By doing this, the solute's solubility will decrease and will lead to the formation of benzoic acid and phenanthrene crystal.
