Fosch-Villaronga,2019-11-04 The integration of robotic systems and artificial intelligence into healthcare settings is

accelerating As these technological developments interact socially with children the elderly or the disabled they may raise concerns besides mere physical safety concerns that include data protection inappropriate use of emotions invasion of privacy autonomy suppression decrease in human interaction and cognitive safety Given the novelty of these technologies and the uncertainties surrounding the impact of care automation it is unclear how the law should respond This book investigates the legal and regulatory implications of the growing use of personal care robots for healthcare purposes It explores the interplay between various aspects of the law including safety data protection responsibility transparency autonomy and dignity and it examines different robotic and AI systems such as social therapy robots physical assistant robots for rehabilitation and wheeled passenger carriers Highlighting specific problems and challenges in regulating complex cyber physical systems in concrete healthcare applications it critically assesses the adequacy of current industry standards and emerging regulatory initiatives for robots and AI After analyzing the potential legal and ethical issues associated with personal care robots it concludes that the primarily principle based approach of recent law and robotics studies is too abstract to be as effective as required by the personal care context Instead it recommends bridging the gap between general legal principles and their applicability in concrete robotic and AI technologies with a risk based approach using impact assessments As the first book to compile both legal and regulatory aspects of personal care robots this book will be a valuable addition to the literature on robotics artificial intelligence human robot interaction law and philosophy of technology

Bulletin of Prosthetics Research, 1980 **Living with Robots** Paul Dumouchel, Luisa Damiano, 2017-11-06 From artificial intelligence to artificial empathy a timely and well written volume that addresses many contemporary and future moral questions Library Journal Today s robots engage with human beings in socially meaningful ways as therapists trainers mediators caregivers and companions Social robotics is grounded in artificial intelligence but the field s most probing questions explore the nature of the very real human emotions that social robots are designed to emulate Social roboticists conduct their inquiries out of necessity every robot they design incorporates and tests a number of hypotheses about human relationships Paul Dumouchel and Luisa Damiano show that as roboticists become adept at programming artificial empathy into their creations they are abandoning the conventional conception of human emotions as discrete private internal experiences Rather they are reconceiving emotions as a continuum between two actors who coordinate their affective behavior in real time Rethinking the role of sociability in emotion has also led the field of social robotics to interrogate a number of human ethical assumptions and to formulate a crucial political insight there are simply no universal human characteristics for social robots to emulate What we have instead is a plurality of actors human and nonhuman in noninterchangeable relationships Foreshadowing an inflection point in human evolution Living with Robots shows that for social robots to be effective they must be attentive to human uniqueness and exercise a degree of social autonomy More than mere automatons they must become social actors capable of modifying the rules that govern their interplay with humans A

detailed tour of the philosophy of artificial intelligence AI especially as it applies to robots intended to build social relationships with humanity If we are to build a robust appropriate ethical structure around the next generation of technical development some combination of deep learning artificial intelligence robotics and artificial empathy we need to understand that managing the impact of these technologies is far too important to be left to those who are enthusiastically engaged in producing them Times Higher Education

Imagining Care Amelia DeFalco,2016-04-06 Imagining Care brings literature and philosophy into dialogue by examining caregiving in literature by contemporary Canadian writers alongside ethics of care philosophy Through close readings of fiction and memoirs by Margaret Atwood Alice Munro Michael Ignatieff Ian Brown and David Chariandy Amelia DeFalco argues that these narratives expose the tangled particularities of relations of care dependency and responsibility as well as

issues of marginalisation on the basis of gender race and class DeFalco complicates the myth of Canada as an unwaveringly caring nation that is characterized by equality and compassion Caregiving is unpredictable one person s altruism can be another s narcissism one s compassion another s condescension or even cruelty In a country that conceives of itself as a caring society these texts depict in stark terms the ethical dilemmas that arise from our attempts to respond to the needs of others
