Catalog of Copyright Entries Library of Congress. Copyright Office, 1973 The Play Within the Play Gerhard Fischer, Bernhard Greiner, 2007 The thirty chapters of this innovative international study are all devoted to the topic of the play within the play The authors explore the wide range of aesthetic literary theoretical and philosophical issues associated with this rhetorical device not only in terms of its original meta theatrical setting from the baroque idea of a theatrum mundi onward to contemporary examples of postmodern self referential dramaturgy but also with regard to a variety of different generic applications e g in narrative fiction musical theatre and film The authors internationally recognized specialists in their respective fields draw on recent debates in such areas as postcolonial studies game and systems theories media and performance studies to analyze the specific qualities and characteristics of the play within the play as ultimate affirmation of the self the Hamlet paradigm as a self reflective agency of meta theatrical discourse and as a vehicle of intermedial and intercultural transformation The challenging study with its underlying premise of play as a key feature of cultural anthropology and human creativity breaks new ground by placing the play within the play at the centre of a number of intersecting scholarly discourses on areas of topical concern to scholars in the humanities Four Plays: "The Recruiting Officer," "The Beaux' Stratagem," "The Constant Couple," and "The Twin-Rivals." Restorative Christ Geoff Broughton, 2015-02-26 Erik Erikson best known for his life cycle theory and concept of the identity crisis proposed that we are comprised of a number of selves In several earlier books including *At Home in the World* Donald Capps has suggested that the emotional separation of young children especially boys from their mothers results in the development of a melancholy self In this book Capps employs Erikson s assignment of an inherent strength to each stage of the life cycle and proposes that the life enhancing strengths of the childhood years hope will purpose and competence are central to the development of a resourceful self and that this self counters the life diminishing qualities of the melancholy self Focusing on Erikson s own writings Capps identifies the four primordial resources that Erikson associates with childhood humor play dreams and hope and shows how these resources assist children in confronting life s difficulties and challenges Capps further suggests that the resourceful self that develops in childhood is central to Jesus own vision of what we as adults may become if we follow the lead of little children **Pageants and Plays Depicting the Life of George Washington and His Time** United States George Washington Bicentennial Commission, 1932 *The Forms of Renaissance Thought* L.

Barkan, B. Cormack, S. Keilen, 2008-11-27 This book addresses works of the European Renaissance as they relate both to the world of their origins and to a modern culture that turns to the early moderns for methodological provocation and renewal. It charts the most important developments in the field since the turn towards cultural and ideological features of the Renaissance imagination.

Hardness of Approximation Between P and NP Aviad Rubinfeld, 2019-06-07 Nash equilibrium is the central solution concept in Game Theory. Since Nash's original paper in 1951, it has found countless applications in modeling strategic behavior of traders in markets, human drivers and electronic routers in congested networks, nations in nuclear disarmament negotiations and more. A decade ago, the relevance of this solution concept was called into question by computer scientists who proved, under appropriate complexity assumptions, that computing a Nash equilibrium is an intractable problem. And if centralized, specially designed algorithms cannot find Nash equilibria, why should we expect distributed, selfish agents to converge to one? The remaining hope was that at least approximate Nash equilibria can be efficiently computed. Understanding whether there is an efficient algorithm for approximate Nash equilibrium has been the central open problem in this field for the past decade. In this book, we provide strong evidence that even finding an approximate Nash equilibrium is intractable. We prove several intractability theorems for different settings: two player games and many player games and models, computational complexity, query complexity and communication complexity. In particular, our main result is that under a plausible and natural complexity assumption, Exponential Time Hypothesis for PPA, there is no polynomial time algorithm for finding an approximate Nash equilibrium in two player games. The problem of approximate Nash equilibrium in a two player game poses a unique technical challenge: it is a member of the class PPA which captures the complexity of several fundamental total problems, i.e. problems that always have a solution, and it also admits a quasipolynomial time algorithm. Either property alone is believed to place this problem far below NP-hard problems in the complexity hierarchy, having both simultaneously places it just above P at what can be called the frontier of intractability. Indeed, the tools we develop in this book to advance on this frontier are useful for proving hardness of approximation of several other important problems whose complexity lies between P and NP: Brouwer's fixed point, market equilibrium, CourseMatch, A CEEI, densest k-subgraph, community detection, VC dimension and Littlestone dimension, and signaling in zero sum games.

Algorithmic Game Theory Marios Mavronicolas, Maria Papadoupoulou, 2009-10-13 This book constitutes the refereed proceedings of the Second International Symposium on Algorithmic Game Theory (SAGT 2009) held in Paphos, Cyprus, in October 2009. The 29 revised full papers presented together with 3 invited lectures were carefully reviewed and selected from 55 submissions. The papers are intended to cover all important areas such as solution concepts, game classes, computation of equilibria and market equilibria, algorithmic mechanism design, automated mechanism design, convergence and learning in games, complexity classes in game theory, algorithmic aspects of fixed point theorems, mechanisms, incentives and coalitions, cost sharing, algorithms, computational problems in economics, finance, decision theory and pricing.

Planning Based on Decision Theory Giacomo Della Riccia, Rudolf Kruse, Didier Dubois, Hans-J. Lenz, 2014-05-04 Planning of actions based on decision theory is a hot topic for many disciplines. Seemingly unlimited computing power, networking, integration and collaboration have meanwhile attracted the attention of fields like Machine Learning, Operations Research, Management Science and Computer Science. Software agents of e-commerce, mediators of Information Retrieval Systems and Database-based Information Systems are typical new application areas. Until now, planning methods were successfully applied in production logistics, marketing, finance management and used in robots, software agents etc. It is the special feature of the book that planning is embedded into decision theory and this will give the interested reader new perspectives to follow up.

The Foundations of Behavioral Economic Analysis Sanjit Dhama, 2019-12-16 This sixth volume of The Foundations of Behavioral Economic Analysis covers behavioral models of learning. It is an essential guide for advanced undergraduate and postgraduate students seeking a concise and focused text on this important subject and examines evolutionary game theory, models of learning and stochastic social dynamics. This updated extract from Dhama's leading textbook allows the reader to pursue subsections of this vast and rapidly growing field and to tailor their reading to their specific interests in behavioral economics.

The Radical Act of Listening: Making Documentary and Investigative Theatre KJ Sanchez, 2024-09-17 The Radical Act of Listening: Making Documentary and Investigative Theatre explores best practices in the field of Documentary and Investigative theatre and offers readers a how-to guide for making their own work, written by a leading practitioner in the field. This book looks at how listening can radically bring about change through documentary and investigative theatre. It examines the mechanics and value of listening and how theatre practitioners can use these skills to create theatre. What does it mean to really listen, especially during a time when everyone is shouting? Can we listen without an agenda? Can we take what we hear and find ethical ways to share it with others so that we capture nuance, complexity, contradiction, i.e. all things human? In exploring these questions, author KJ Sanchez shares conversations with peers and fellow artists who work in the fields of interview-based and non-fiction art practices to look at what it takes to be a great listener and a great theatre maker. Featuring key artists, themes and practices, this book is written for students and practitioners interested in creating documentary and investigative theatre as well as other interview-based artforms.
