

RESTRICTED TAKEOFF

Caution: Avoid sudden bursts of power in the takeoff. Make it smooth and steady.

After you have pulled out and lined up on the runway, make sure that the steerable tailwheel is locked—it must be locked with the stick back for takeoff.

Then advance the throttle gradually, and smoothly, up to the desired manifold pressure. Don't hunt the tail up by pushing forward on the stick until you have sufficient airspeed to give you effective rudder control.

This is important to watch in the takeoff, since the P-51, like all single-engine planes, has a tendency to turn left because of torque. If you leave the tail off the ground too quickly with the elevators, better be ready to use right rudder promptly.

Keep the airplane in a 3-point attitude until you have plenty of airspeed. In a normal takeoff, the rudder trim tab is sufficient to make the torque almost unnoticeable.

After takeoff:

1. Raise the landing gear by pulling the land-

ing gear lever inward and up. Be sure it catches in the up position.

2. Throttle back to climbing mixture.

3. Adjust the prop to climbing rpm.

4. Re-trim the ship for climbing attitude.

5. Turn the booster pump to normal.

6. Then check over all your instruments that they are functioning properly and exceeding their limitations.

In checking the instruments, make sure the ammeter indicator shows the generator is charging properly. Immediately after the ammeter should go up to not over 30, then drop back below 50. Be sure it drops to normal, or you will overcharge your battery. Overcharging can ruin a battery just as overloading.

Make sure, also, that hydraulic pressure builds up to approximately 1000 psi as landing gear retracts completely.

LANDING

On approaching the field for a landing, be sure to check around the cockpit before getting into the landing pattern. Anything you can do at this stage in setting controls or making adjustments allows you that much more time to concentrate on the actual landing later.

In approaching the field:

1. Check the fuel tanks and select the fullest tank for the landing.

2. Put the fuel booster pump on NORMAL.

3. Check the mixture control setting—make sure it is in either AUTO RICH or RUN, de-

pending upon the type throttle you have.

4. Set the prop control to about 1.

5. Check the ammeter reading.

6. See that your shoulder harness

7. Then make sure your radio proper channel.

The traffic pattern you use depends upon the local situation. Every field has a pattern, and this pattern may vary from time to time, depending upon local limitations. Therefore, no set is recommended or given in this book.

Me 262 Stormbird jets P 51 Mustang pilots saw it all during World War II P 51 Mustang celebrates the 75th anniversary of the most iconic American warbird written by Cory Graff lead curator at the Flying Heritage Collection one of the world's most important collections and sites for warbird restoration The entire story of this plane is here starting with the astonishing fact that the P 51 Mustang was built in less than 120 days This first version was hardly a world beater and it took the addition of a Rolls Royce designed Merlin to make the Mustang a legend These nimble and versatile fighters were able to escort Allied heavy bombers all the way to Berlin and back In the Pacific their long range ability was pushed to its limit with pilots flying 1 500 mile eight or more hour missions over water to attack Tokyo On the home front Graff profiles the impact manufacturing Mustangs had on workers in Los Angeles and Dallas The United States wasn't finished with the P 51 Mustang after World War II It was used in the Korean War and afterwards as a symbol and icon of American ingenuity Graff explores the post World War II history of this iconic plane making this a book that every single World War II history and aviation enthusiast will want to buy

Me 262 vs P-51 Mustang Robert Forsyth, 2019-12-26 Arguably two of the finest fighters built during the course of World War II the Me 262 and P 51 Mustang heralded new dawns in aircraft performance Making its operational debut in the summer of 1944 and powered by the Jumo 004 jet engine the Me 262 outclassed Allied planes in terms of speed and firepower ratio offering a formidable punch with four 30 mm MK 108 nose mounted cannons However in the P 51 fitted with the Rolls Royce Packard Merlin engine and drop tanks the USAAF finally had a fighter that had the legs to escort its heavy bombers deep into Reich airspace and back If flown to its strengths the P 51 was more than capable of taking on the feared Me 262 on an equal footing despite the differences in power and top speed Indeed the Mustang proved to be the Luftwaffe fighter arm's nemesis When the P 51D sortied over Germany from the summer of 1944 onwards it shredded through the ill trained and depleted Gruppen of the Luftwaffe's defence wings This book examines the two fighters in detail exploring their history and development and containing accurate descriptions of the combats between the P 51 Mustang and the Me 262 in what were some of the most bitter and large scale aerial actions fought over Europe in 1944-45
