Photogrammetry of a 5m Inflatable Space Antenna with Consumer Digital Cameras Richard S. Pappa, 2000 This paper discusses photogrammetric measurements of a 5m diameter inflatable space antenna using four Kodak DC290 2.1 megapixel digital cameras. The study had two objectives: 1 Determine the photogrammetric measurement precision obtained using multiple consumer grade digital cameras and 2 Gain experience with new commercial photogrammetry software packages specifically PhotoModeler Pro from Eos Systems Inc. The paper covers the eight steps required using this hardware/software combination. The baseline data set contained four images of the structure taken from various viewing directions. Each image came from a separate camera. This approach simulated the situation of using multiple time-synchronized cameras which will be required in future tests of vibrating or deploying ultra-lightweight space structures. With four images, the average measurement precision for more than 500 points on the antenna surface was less than 0.020 inches in-plane and approximately 0.050 inches out of plane.

Automotive Accident Reconstruction Donald E. Struble, Ph.D., 2013-09-24 Automotive Accident Reconstruction Practices and Principles introduces techniques for gathering information and interpreting evidence and presents computer-based tools for analyzing crashes. This book provides theory, information, and data sources; techniques of investigation; an interpretation of physical evidence; and practical tips for beginners. It also works as an ongoing reference for experienced reconstructionists. The book emphasizes three things: the theoretical foundation, the presentation of data sources, and the computer programs and spreadsheets used to apply both theory and collected data in the reconstruction of actual crashes. It discusses the specific requirements of reconstructing rollover crashes, offers background in structural mechanics, and describes how structural mechanics and impact mechanics are applied to automobiles that crash. The text explores the treatment of crush energy when vehicles collide with each other and with fixed objects. It delves into various classes of crashes and simulation models. The framework of the book starts backward in time, beginning with the analysis of post-crash vehicle motions that occurred without driver control. It applies time-reverse methods in a detailed and rigorous way to vehicle run-out trajectories, utilizing the available physical evidence. It walks the reader through a collection of digital crash test data from public sources with detailed instructions on how to process and filter the information. It shows the reader how to build spreadsheets detailing calculations involving crush energy and vehicle post-crash trajectory characteristics. It contains a comprehensive treatment of crush energy. This text can also serve as a resource for industry professionals, particularly with regard to the underlying physics.

3D Synthetic Environment Reconstruction Mahdi Abdelguerfi, 2012-12-06 Although synthetic environments were traditionally used in military settings for mission rehearsal and simulations, their use is rapidly spreading to a variety of applications in the commercial research and industrial sectors, such as flight training for commercial aircraft, city planning, car safety research, in real-time traffic simulations, and video games. 3D Synthetic Environment Reconstruction contains seven invited chapters from leading experts in the field.

bringing together a coherent body of recent knowledge relating 3D geospatial data collection design issues and techniques used in synthetic environments design implementation and interoperability In particular this book describes new techniques for the generation of Synthetic Environments with increased resolution and rich attribution both essential for accurate modeling and simulation This book also deals with interoperability of models and simulations which is necessary for facilitating the reuse of modeling and simulation components 3D Synthetic Environment Reconstruction is an excellent reference for researchers and practitioners in the field Automotive Accident Reconstruction Donald E. Struble, John D. Struble, 2020-01-24 This fully updated edition presents practices and principles applicable for the reconstruction of automobile and commercial truck crashes Like the First Edition it starts at the very beginning with fundamental principles information sources and data gathering and inspection techniques for accident scenes and vehicles It goes on to show how to analyze photographs and crash test data The book presents tire fundamentals and shows how to use them in spreadsheet based reverse trajectory analysis Such methods are also applied to reconstructing rollover crashes Impacts with narrow fixed objects are discussed Impact mechanics structural dynamics and conservation based reconstruction methods are presented The book contains a comprehensive treatment of crush energy and how to develop structural stiffness properties from crash test data Computer simulations are reviewed and discussed Extensively revised this edition contains new material on side pole impacts It has entirely new chapters devoted to low speed impacts downloading electronic data from vehicles deriving structural stiffness in side impacts and incorporating electronic data into accident reconstructions *Handbook of Research on Emerging Digital Tools for Architectural Surveying, Modeling, and Representation* Brusaporci, Stefano, 2015-07-13 Technological revolutions have changed the field of architecture exponentially The advent of new technologies and digital tools will continue to advance the work of architects globally aiding in architectural design planning implementation and restoration The Handbook of Research on Emerging Digital Tools for Architectural Surveying Modeling and Representation presents expansive coverage on the latest trends and digital solutions being applied to architectural heritage Spanning two volumes of research based content this publication is an all encompassing reference source for scholars IT professionals engineers architects and business managers interested in current methodologies concepts and instruments being used in the field of architecture *Modeling, Simulation, and Visualization for Real and Virtual Environments* Steve Kessinger, 1999
