Minimally Processed Foods Mohammed Wasim Siddiqui, Mohammad Shafiur Rahman, 2014-10-29. The safety and efficacy of minimal food processing depends on the use of novel preservation technologies. This book first examines what is meant by minimally processed foods including fresh cut, cooked, chilled and part baked products. Next explored are the technologies or methods to produce quality products in terms of safety and nutrition including edible coating, natural preservatives i.e. antimicrobial, flavour enhancer, anti browning, advanced packaging, active antimicrobial and modified or controlled atmosphere and selected non thermal techniques: high pressure, pulsed electric field, ultrasound, light. Preservation of food is crucial to achieving a secure and safe global food supply with the desired sensory quality. In addition the increasing consumer demand for safe, ready to serve, ready to eat and cook products with minimal chemical preservatives has raised expectations. However foods deemed minimally processed such as fresh cut fruits and vegetables, cooked, chilled and half baked foods are delicate products that need special care in preparation, processing, storage and handling. As a result new technologies to develop minimally processed foods have aggressively advanced.

Minimally Processed Foods: Technologies for Safety, Quality and Convenience explores both the definition of minimally processed foods and the methods and technologies used to achieve the safety and nutritional value consumers demand. About the Editors: Mohammed Wasim Siddiqui, Bihar Agricultural University, Sabour, Bhagalpur, India; Mohammad Shafiur Rahman, Sultan Qaboos University, Al khod, Oman.
