the debate on the nature of science often referred to by contemporaries as natural knowledge in Britain during the first half of the 19th century This was the period before major state support for science allowed its professionalization indeed it was a time in which the word scientist although coined in 1833 by William Whewell was not yet widely used In this context the questions about the nature of science were part of a public debate that included the following topics scientific method and intellectual authority the moral demeanour of the man of science the hierarchy of specialised scientific disciplines and the relation with natural theology These topics were discussed both within scientific circles in correspondence and meeting of societies as well as in the wider public sphere constituted by quarterly journals and encyclopaedias A study of these debates allow us to see how British science of this period began to cast loose some of its earlier theological supports but still relied on a moral framework to affirm its distinctive method ethos and cultural value Key-words-in-context Title Index ,1962
