Physical Science P1 Sep 2014:

Understanding Energy and Energy Policy Timothy Braun, Lisa Glidden, 2014-11-13 Activists scientists and policymakers around the world have long argued that we need to find sustainable and secure solutions to the world's energy demands. At issue for citizens worldwide is whether we are scientifically literate enough to understand the potential policy choices before us. *Understanding Energy and Energy Policy* is a one-stop resource for understanding the complexities of energy policy and the science behind the utilization of energy sources. The multidisciplinary perspective presented in this book is necessary for readers to be able to weigh the advantages and disadvantages of potential energy policies. The book draws on case studies from the global North and South from countries that are resource poor and resource rich while providing explanations of the science and politics behind burning fossil fuels and power created through nuclear energy, solar energy, geothermal energy, wind energy, biofuels, and water.

Cerebral endothelial and glial cells are more than bricks in the Great Wall of the brain: insights into the way the blood-brain barrier actually works (Celebrating the centenary of Goldman's experiments) Elena García-Martín, George E. Barreto, José A. G. Agúndez, Rubem C. A. Guedes, Ramon Santos El-Bachá, 2015-07-02 When Ehrlich discovered the first evidence of the blood-brain barrier in 1885, he probably did not perceive the Great Wall that remained hidden from consciousness inside the central nervous system. Ehrlich had observed that acidic vital dyes did not stain the brain if they were injected into the blood stream. A century ago (1913), Goldman showed that the injection of trypan blue in the cerebrospinal fluid stained only the brain but not the other organs. For almost a century, it was thought that the blood-brain barrier (BBB) consisted in a physical barrier resulting from the restricted permeability of the cerebral endothelial cell layer, as

they are joined by tight junctions However as scientists are always looking for news in what is already discovered in the end of the 20th century we had evidences that cerebral endothelial and glial cells express several drug metabolizing enzymes consisting in a second protection system a metabolic barrier Furthermore the drugs and their metabolites must overcome the activity of several multidrug resistance proteins that function as ATP dependent efflux pumps consisting in the third line of defence the active barrier Therefore the way the BBB actually works should be better explained Several endogenous compounds as well as xenobiotics may be activated by enzymes of the metabolic barrier generating reactive oxygen species that could damage neurons Therefore endothelial and glial cells possess endogenous protecting compounds and enzymes against oxidants consisting in an antioxidant barrier When all these systems fail glial cells mainly microglia secrete cytokines in an attempt to crosstalk with defence cells asking for help which consists in an immune barrier In cerebral regions that are devoid of the physical barrier such as circumventricular organs the metabolic active antioxidant and immune barriers are reinforced It is important to understand how cells involved in the BBB interact with one another and the dynamic mechanisms of their functions This Research Topic published in this e Book considers recent highlights in BBB structure cell and molecular biology biotransformation physiology pathology pharmacology immunology and how these basic knowledges can be applied in drug discovery and clinical researches rewriting what is already written and paving the way that goes to the Great Wall in the Frontiers of the Brain in this new century that is just beginning **Nuclear Science Abstracts**, 1976

Subcommittee on Energy, 2015 **CERN Courier**, 2013 *From Hysteria to Hormones* Amy Koerber, 2018-03-15 In *From Hysteria to Hormones* Amy Koerber examines the rhetorical activity that preceded the early twentieth century emergence of the word hormone and the impact of this word on expert understandings of women's health Shortly after Ernest Henry Starling coined the term hormone in 1905 hormones began to provide a chemical explanation for bodily phenomena that were previously understood in terms of wandering wombs humors energies and balance In this study Koerber posits that the discovery of hormones was not so much a revolution as an exigency that required old ways of thinking to be twisted reshaped and transformed to fit more scientific turn of the century expectations of medical practices She engages with texts from a wide array of medical and social scientific subdisciplines with material from medical archives including patient charts handwritten notes and photographs from the Salpêtrière Hospital where Dr Jean Charcot treated hundreds of hysteria patients in the late nineteenth century and with current rhetorical theoretical approaches to the study of health and medicine In doing so Koerber shows that the boundary between older nonscientific ways of understanding women's bodies and newer scientific understandings is much murkier than we might expect A clarifying examination of how the term hormones preserves key concepts that have framed our understanding of women's bodies from ancient times to the present this innovative book illuminates the ways in which the words we use today to discuss female reproductive health aren't nearly as scientifically accurate or socially progressive as believed Scholars of rhetoric gender studies and women's health will find Koerber's work provocative and valuable
