GENERAL SCIENCE SOLVED PAPERS YCT EXPERT TEAM, 2020 RRB GENERAL SCIENCE SOLVED PAPERS **Simulating Social Complexity** Bruce Edmonds, Ruth Meyer, 2017-11-24 This volume examines all aspects of using agent or individual based simulation This approach represents systems as individual elements having their own set of differing states and internal processes The interactions between elements in the simulation represent interactions in the target systems What makes this social is that it can represent an observed society Social systems include all those systems where the components have individual agency but also interact with each other This includes human societies and groups but also increasingly socio technical systems where the internet based devices form the substrate for interaction These systems are central to our lives but are among the most complex known This poses particular problems for those who wish to understand them The complexity often makes analytic approaches infeasible but on the other hand natural language approaches are also

inadequate for relating intricate cause and effect This is why individual and agent based computational approaches hold out the possibility of new and deeper understanding of such systems This handbook marks the maturation of this new field It brings together summaries of the best thinking and practices in this area from leading researchers in the field and constitutes a reference point for standards against which future methodological advances can be judged This second edition adds new chapters on different modelling purposes and applying software engineering methods to simulation development Revised existing content will keep the book up to date with recent developments This volume will help those new to the field avoid reinventing the wheel each time and give them a solid and wide grounding in the essential issues It will also help those already in the field by providing accessible overviews of current thought The material is divided into four sections Introduction Methodology Mechanisms and Applications Each chapter starts with a very brief section called Why read this chapter followed by an abstract which summarizes the content of the chapter Each chapter also ends with a section on Further Reading Whilst sometimes covering technical aspects this second edition of *Simulating Social Complexity* is designed to be accessible to a wide range of researchers including both those from the social sciences as well as those with a more formal background It will be of use as a standard reference text in the field and also be suitable for graduate level courses

The Adulteration of Children's Sports Kristi Erdal, 2020-07-20 *The Adulteration of Children's Sports* explores current behavioral and physiological research about how children's organized sport has changed how adults' goals and needs are at the heart of those changes and the consequences of those changes on children's enjoyment of sport and on their autonomy creativity and moral reasoning outside of sport Adult introduction of early competition extrinsic rewards early sport specialization and year round participation has thwarted children's intrinsic motivation and contributed to children's attrition from sport Kristi Erdal explores concerns about the future of sport itself as adult mediated selection practices whittle down young athletes earlier on shakier criteria Parents and coaches complicity in these practices however is based on intermediaries poorly interpreting or ignoring the research literature Thus the final chapters of this book are about translating the research into applied ideas for change Erdal provides an essential introduction to evidence based research about children's health and well being in sport and debunks myths along the way Adults built the problems compiled in this text We can dismantle them as well

researchers in the field in *Frontiers in Psychiatry* between 2014 and 2016

Panoramic View of Cognitive Impairment: Interdisciplinary Cognitive Research Fangyi Xu, 2024-08-01 Cognition information processing activities for individuals to understand the objective world reflects the real world in the human brain Cognitive impairment refers to a decline in cognitive functioning of varying degrees from subjective cognitive impairment to severe dementia With the accelerated global population aging the number of people with cognitive impairment is increasing rapidly Dementia has become a major contributor to the global burden of disease and loss of disability adjusted life years Cognitive impairment is a heterogeneous syndrome the cause of which is still myriad Although significant advancement in the understanding of the pathology of cognitive impairment has been made in recent decades the tools and strategies at our disposal to deal with cognitive impairment are still very limited Currently no disease modified treatment has been identified Interdisciplinary research refers to the methodology of comprehensive understanding or problem solving through the intersection between natural science and social science and other disciplines or the internal intersection between many disciplines within a certain category of science It is conducive to the overall understanding of problems and identifying effective solutions to complex problems faced by human society In recent years studies in many fields other than neurology have inspired our understanding of cognitive impairment putting forward new insights into its phenomenology and providing many effective prevention or alleviation strategies to delay cognitive decline or manage the symptoms It is very likely that interdisciplinary research would shed a light on our efforts to cope with the challenges brought by the growing epidemic of cognitive impairment

Mechanisms underlying firing in healthy and sick human motoneurons Parveen N.S. Bawa, Maria Piotrkiewicz, Annie Schmied, 2015-07-08 Since the latter half of the twentieth century an enormous amount of knowledge about mammalian motoneuron pools has been collected This progress was enabled mostly by the development of the precise techniques of intracellular recordings in acute animal experiments many of which were conducted under deep anaesthesia Recently obtained evidence indicates that anaesthetics used at that times changed certain properties of the cell membrane which might affect firing of the neuron Experiments on normal humans gets around this problem which lets one compare MN firing characteristics in humans and reduced preparations Firing pattern of human motoneurons is obtained indirectly by recording from a few muscle fibres of a motor unit Since there is one to one relationship between motor unit and motoneuron firing the statistical analysis of motor unit firing is equivalent to the analysis of motoneuron firing This analysis based on the essential knowledge about motoneuron physiology gained from the direct measurements in animal experiments and verified by computer simulations allows one to draw conclusions about the physiological properties of human motoneurons For obvious reasons the deductions made on properties of human motoneuron from these analyses should be accepted with caution On the other hand human experiments provide the unique opportunity to study intact motoneurons during normal physiological behavior Thus combining information obtained from animal and human experiments and computer simulations

gives insight into underexplored problems of motor control This E book contains a collection of articles with range of exciting findings on the physiology and pathology of human motoneurons The collection covers such important issues concerning firing of healthy motoneurons as recruitment and rate coding as well as motoneuron excitability discusses intrinsic motoneuron properties disclosed by studying double discharges and provides information on broad spectrum of motoneuron pathology It is our hope that this collection promotes further expansion of knowledge on human motoneurons Essentials of Youth Fitness Avery D.
