Raw Deal Steven Hill, 2015-10-20 What's going to happen to my job? That's what an increasing number of anxious Americans are asking themselves. The US workforce, which has been one of the most productive and wealthiest in the world, is undergoing an alarming transformation. Increasing numbers of workers find themselves on shaky ground, turned into freelancers, temps, and contractors. Even many full-time and professional jobs are experiencing this precarious shift. Within a decade, a near majority of the 145 million employed Americans will be impacted. Add to that the steamroller of automation, robots, and artificial intelligence already replacing millions of workers and projected to obsolesce millions more, and the jobs picture starts looking grim. Now a weird yet historic mash-up of Silicon Valley technology and Wall Street greed is thrusting upon us the latest economic fraud: the so-called sharing economy, with companies like Uber, Airbnb, and TaskRabbit allegedly liberating workers to become independent and their own CEOs hiring themselves out for ever smaller jobs and wages while the companies profit. But this share-the-crumbs economy is just the tip of a looming iceberg that the middle class is drifting toward. **Raw Deal: How the Uber Economy and Runaway Capitalism Are Screwing American Workers** by veteran journalist Steven Hill is an exposé that challenges conventional thinking and the hype celebrating this new economy by showing why the vision of the techno-sapient leaders and their Ayn Rand libertarianism is a dead end. In **Raw Deal**, Steven Hill proposes pragmatic policy solutions to transform the US economy and its safety net and social contract, launching a new kind of deal to restore power back into the hands of American workers. *Human-Computer Interaction. Advanced Interaction, Modalities, and Techniques* Masaaki Kurosu, 2014-06-07 The 3-volume set LNCS 8510, 8511, and 8512 constitutes the refereed proceedings of the 16th International Conference on Human-Computer Interaction (HCII 2014) held in Heraklion, Crete, Greece, in June 2014. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences was carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. Neurobiology of the Axon in Health and Disease Maren Engelhardt, Vann Bennett, 2019-11-04 Ever since Santiago Ramón y Cajal sketched his captivating panels of the microscopic structure of the brain with its vast diversity of neuronal morphology, over a century ago scientists have been drawn to this seemingly chaotic network of neurites and processes to uncover how structure relates to function. During the course of a century, we have moved from merely describing neuronal and glial morphology to furthering our understanding of such intricate processes as organelle and factor transport, cellular compartmentalization, neuronal polarity, cytoskeleton dynamics, neurite pathfinding, and the impact of pathophysiological insult on these structures and events. Yet to this day, and likely for the foreseeable future, much work remains to be done to

fully grasp the exceptional role of neurites for the function of larger neuronal ensembles and networks. While the somatodendritic domain of neurons has been in the focus of attention for many years mostly because of its great dynamic remodeling capacity during events of plasticity e.g. learning, the axonal domain has somehow remained in the background despite the fact that especially recent comprehensive studies from various fields of research underline the axon's contribution to dynamic plasticity processes. Consequently, this Research Topic focuses on the many exciting aspects of axonal neurobiology ranging from membrane composition and molecular determination during development to axonal domain specialization and physiology in health and disease.

In Chapter 1, Axons in the PNS, Bombeiro et al. use immunodeficient mice to study the role of lymphocytes during the regeneration of peripheral nerves, showing that the modulation of immune responses after injury can be an efficient approach to enhance nerve regeneration in the PNS. Using a DRG model, Berbusse et al. identify the onset of damage to mitochondrial structure and dynamics as a key event during early axon degeneration and provide evidence that *Nmnat1*, a member of the family of nicotinamide nucleotide adenylyltransferases, can have protective effects by preserving normal mitochondrial integrity and dynamics. In another study of PNS nerve regeneration, Law et al. use proteomics approaches via Mass Spectrometry to provide evidence that rosovitine, a synthetic purine nucleoside analog, can successfully promote PNS axon regeneration.

In Chapter 2, Axonal development in the central nervous system, Yoshimura et al. analyze specialized axonal domains, namely the axon initial segment and nodes of Ranvier, with regards to their expression profiles of the major scaffolding protein IV spectrin. Super-resolution microscopy reveals a potential developmental switch of spectrin isoforms at both axonal domains. In a related study also using super-resolution microscopy, Leterrier et al. examine a potential reciprocal role of membrane partners in ankyrin G targeting and stabilization at the axonal membrane during development. The authors demonstrate a tight and precocious association of ankyrin G with its membrane partners. Hfflin et al. address the question of axon initial segment morphology across different cell classes in cortical organotypic slice cultures and find a surprising heterogeneity, especially between pyramidal cells and interneurons in primary visual cortex. In a major step towards establishing a successful live label of the axon initial segment, Dumitrescu et al. report the development of a genetically encoded construct consisting of a voltage-gated sodium channel intracellular domain fused to yellow fluorescent protein YFP-Nav1.3. Nelson and Jenkins then provide a comprehensive Review article on the axon initial segment and nodes of Ranvier with a special focus on the various scaffolding protein isoforms and their role in human disease.

In Chapter 3, Axonal physiology and plasticity, Nikitin et al. investigate fast onset dynamics of action potentials during neuronal development in vitro, showing that encoding of high frequencies improves upon culture maturation, accompanied by the development of passive electrophysiological properties and action potential generation. Using pharmacological and RNA interference approaches, Tapia et al. provide evidence that cannabinoid receptors and their ligands can modulate dendritic morphology and thus indirectly also affect ankyrin G accumulation at the axon initial segment. A Mini Review by Zbili et al.

discusses the potential impact of subthreshold changes in presynaptic membrane potential before action potential initiation on neurotransmitter release and which significant impact such mechanisms could have on information processing in neuronal circuits Yamada and Kuba close this chapter with a Mini Review on axon initial segment plasticity with a particular focus on ion channels and the biophysics of excitability In Chapter 4 Axon degeneration and regeneration Hamada et al investigate the often overlooked question to which extent myelin loss affects action potential propagation along distal branch points and axon collaterals Using the cuprizone demyelination model and optical voltage sensitive dye imaging the authors uncover functional consequences of demyelination that reach well beyond the main axon In a model of mild traumatic brain injury Vascak et al demonstrate complex aspects of this injury type on neocortical circuit function including changes in inhibitory perisomatic input and axon initial segment driven output in affected layer V neurons In a Mini Review Grosch et al discuss recent advances in the field of Parkinson's disease with a focus on early degeneration in dopaminergic and serotonergic neurons of the basal ganglia The last two articles cover the topic of axonal regeneration Li et al investigate the role of activated astrocytes in spinal cord lesion and how their functional downregulation via an inhibitor of mitochondrial fission Mdivi 1 could potentially have positive impact on lesion scar formation and axonal regeneration In a final Review Liu et al highlight recent advances in the development of biomaterial scaffolds and cell transplantation strategies to combine two promising therapeutic approaches for spinal cord injury
