Soil biodiversity Helen Phillips, 2022-10-24 About this collection This Collection is the work of more than 50 scientists and Young Reviewers from all around the globe Our role as editors together with the authors was to share our love of soil biodiversity with you In this Collection you will discover that soils are full of life We will introduce some of the methods and techniques used by scientists to observe the life below our feet We will show you that belowground life is essential to have healthy soils and therefore for us However you will soon realize that belowground life is changing and under multiple threats The authors will give ideas on how we can protect soil biodiversity and invite you to actively help us in studying and protecting this valuable ecosystem We have divided this article Collection into four sections each of which is introduced below To make our articles accessible to as many of you as possible we have created a website hosting translations to languages other than English Soils are alive Soils are not just rock and dust but are astonishing living systems that are full of life In this first section you will read about little creatures that you might already know like earthworms You will also discover many new creatures like springtails and mites that live close to you in your garden in the parks or in nearby fields Our authors will even show you an entire world of tiny creatures not visible by the naked eye tiny bacteria fungi and protists Soil biodiversity is about the diversity of these organisms But how many different organisms are there How different are they from each other To answer these questions scientists need tools and methods to observe and understand the biodiversity under our feet How can we observe this beautiful world under our feet In the articles in this section the authors describe the tools and methods they use to observe and understand soil biodiversity It is not easy to see the creatures in the soil and what they are doing under our feet therefore soils are often called the black box Some scientists are using the body fat of soil creatures to identify them and monitor what they feed on others use DNA to identify soil organisms like forensic investigators in the movies In addition our authors will explain how soil organisms are talking to each other and how we study these interactions What are scientists learning from studying these soil creatures Is soil biodiversity important to us Why is soil biodiversity so essential to us In this section the authors illustrate that soil biodiversity maintains processes essential for our well being For example you will learn that soil bacteria can keep your food safe by protecting it from diseases We will highlight that soil biodiversity is essential for nature to work For example the authors will demonstrate that soil organisms are vital for recycling dead matter and releasing the nutrients in it In addition you will see how soil organisms are directly affecting greenhouse gas emissions such as carbon dioxide and methane by controlling soil processes Controlling these emissions is critical for keeping our climate stable Soil organisms are alive moving and interacting but are all these organisms and their important functions changing with time Are these communities of soil organisms set in stone Soil communities are changing You probably know that a lot of trees flowers and animals can change over the year with the seasons flowers and fruits appear in spring and summer leaves drop from the trees in fall Soil animals are also changing with

the seasons And like us soil organisms can move to new places or disappear from others either permanently or temporarily These changes can be natural but can also be the result of human activities Our authors will show you that agricultural practices and the effects of climate change such as reduced rainfall are affecting soil organisms their functions and the services they provide to us As we saw previously soil biodiversity is essential for us so any changes could be disastrous So can we protect the organisms in the soil in the same way we protect other organisms such as tigers and pandas Protecting soil biodiversity In the final section of this Collection our authors will show you how to protect soil biodiversity We can reduce our impacts and conserve this wonderful belowground life But we can even go a step further and restore lost soil functions using our knowledge of soil biodiversity for example by using fungi to restore soils However this is only possible if we understand soil biodiversity and its function This is where you can help for example by participating in a citizen science project and going outside to help researchers Conclusion This Collection is about illuminating the black box of soil and showing you some of the fantastic creatures living under our feet You will learn how scientists are studying soil biodiversity and how this soil biodiversity is essential for us However you will also see that soil biodiversity is under threat and needs to be protected Many people across the globe will be needed to effectively protect these vital systems below our feet That s why it is important to spread the word about the beauty and fragility of belowground life We hope that this Collection will make you a champion of soil biodiversity and that you will pass on this message so that everyone will become more aware of and be better able to protect soil biodiversity Now it is your turn to explore and engage with the content of this Collection We hope there will be something for all of you
