The Third Lens Andrew S. Reynolds, 2018-06-21 Does science aim at providing an account of the world that is literally true or objectively true Understanding the difference requires paying close attention to metaphor and its role in science In The Third Lens Andrew S Reynolds argues that metaphors like microscopes and other instruments are a vital tool in the construction of scientific knowledge and explanations of how the world works More than just rhetorical devices for conveying difficult ideas metaphors provide the conceptual means with which scientists interpret and intervene in the world Reynolds here investigates the role of metaphors in the creation of scientific concepts theories and explanations using cell theory as his primary case study He explores the history of key metaphors that have informed the field and the experimental philosophical and social circumstances under which they have emerged risen in popularity and in some cases faded from view How we think of cells as chambers organisms or even machines makes a difference to scientific practice Consequently an accurate picture of how scientific knowledge is made requires us to understand how the metaphors scientists use and the social values that often surreptitiously accompany them influence our understanding of the world and ultimately of ourselves The influence of metaphor isn't limited to how we think about cells or proteins in some cases they can even lead to real material change in the very nature of the thing in question as scientists use technology to alter the reality to fit the metaphor Drawing out the implications of science's reliance upon metaphor The Third Lens will be of interest to anyone working in the areas of history and philosophy of science science studies cell and molecular biology science education and communication and metaphor in general
