Reconstructing the Tree of Life Trevor R. Hodkinson, John A.N. Parnell, 2006-12-26 To document the world's diversity of species and reconstruct the tree of life we need to undertake some simple but mountainous tasks. Most importantly we need to tackle species-rich groups. We need to collect, name, and classify them and then position them on the tree of life. We need to do this systematically across all groups of organisms and build a comprehensive volume that treats these methods in depth. *Molecular Evolution and Phylogenetics* Masatoshi Nei, Sudhir Kumar, 2000-07-27 During the last ten years, remarkable progress has occurred in the study of molecular evolution. Among the most important factors that are responsible for this progress are the development of new statistical methods and advances in computational technology. In particular, phylogenetic analysis of DNA or protein sequences has become a powerful tool for studying molecular evolution. Along with this developing technology, the application of the new statistical and computational methods has become more complicated, and there is no comprehensive volume that treats these methods in depth. *Molecular Evolution and Phylogenetics* fills this gap and presents various statistical methods that are easily accessible to general biologists as well as biochemists, bioinformaticists, and graduate students. The text covers measurement of sequence divergence, construction of phylogenetic trees, statistical tests for detection of positive Darwinian selection, inference of ancestral amino acid sequences, construction of linearized trees, and analysis of allele frequency data. Emphasis is given to practical methods of data analysis, and methods can be learned by working through numerical examples using the computer program MEGA2 that is provided.

Cutting-Edge Mathematics Henar Herrero, María Cruz Navarro, Hélia Serrano, 2024-08-25 The book contains a selection of research and expository papers in pure and applied mathematics presented by various authors as plenary or invited speakers at the biennial congress of the Spanish Royal Mathematical Society held in Ciudad Real, Spain, in January 2022. The main results focus on the Yang problem and its solution proposed by Globevnik; a phylogenetic reconstruction based on algebra; the Calderón problem for local and nonlocal Schrödinger equations; some open problems in orthogonal polynomial theory; Quillen's rational homotopy theory; Ulrich bundles and applications; and free objects in theory of Banach spaces. Researchers in these fields are potential audiences.

Logic Programming Maria Garcia Banda, Enrico Pontelli, 2008-12-02 This book constitutes the refereed proceedings of the 24th International Conference on Logic Programming (ICLP 2008) held in Udine, Italy, in December 2008. The 35 revised full papers, together with 2 invited talks, 2 invited tutorials, 11 papers of the co-located first Workshop on Answer Set Programming and Other Computing Paradigms (ASPOCP 2008) as well as 26 poster presentations and the abstracts of 11 doctoral consortium articles, were carefully reviewed and selected from 177 initial submissions. The papers cover all issues of current research in logic programming; they are organized in topical sections on applications, algorithms, systems, and implementations, semantics and foundations, analysis and transformations, CHRs and extensions, implementations and systems, answer set programming and extensions, as well as constraints and optimizations.
