A₁PRECISION MEASUREMENTS-

Objectives:-

To study some of the instruments and methods used in precision measurements , and to compute the volume and density of various items.

Apparatus: Metre rule, vernier calipers ,micrometer screw gauge ,electronic balance and traveling microscope .Such items as copper cylinder , steel ball and glass capillary tube are also supplied.

METHOD: The experiment comprises measurement of the various objects supplied with the appropriate instruments. Where feasible, at least two instruments should be used for each measurement and the precision obtained in each case compared. In this way, the volume and density of atleast two metal objects weighings should be done on the electronic balance. In the second part of the experiment, some electrical circuits have been set up for you to measure the current. Measure the current using an ammeter, a milliammeter and a microammeter, and estimate the reading errors in each case. **N.B.** In all cases an estimate of the precision obtained should be, i.e. note the reading errors on all measurements. Where appropriate note the zero error. Record the data in work sheet 1, working out any calculations asked for. Answer the questions posed on the sheet.

WORKSHEET 1

N.B. You must include in the table the units of any measurements you take.
