

QUESTION 12

- (a)
- The number of photoelectrons emitted per second is directly proportional to the intensity of radiation.
 - The energy of the emitted electrons depend on the frequency of the incident radiation.
 - There exists a threshold frequency for all surfaces, below which no electrons are emitted no matter the intensity of radiation.

(b) Given: Power of source = 6×10^{-3} Watts or Joules / s
 No of photons per second = 1×10^{16}

$$\text{Energy per photon} = \frac{\text{Power}}{\text{no of photons per second}}$$

$$= \frac{6 \times 10^{-3}}{1 \times 10^{16}}$$

$$E = hf = 6 \times 10^{-19} \text{ Joules}$$

Energy = $hf - W_0 = eV_0$ where W_0 is work function.
 $E - eV_0 = W_0$ where V_0 is stopping potential
 $6 \times 10^{-19} - (1.6 \times 10^{-19}) \times (2.2) = W_0$
 $6 \times 10^{-19} - 3.52 \times 10^{-19} = W_0$
 $W_0 = 2.48 \times 10^{-19} \text{ Joules}$
 $W_0 = \frac{2.48 \times 10^{-19}}{1.6 \times 10^{-19}} \text{ eV}$
 $W_0 = 1.55 \text{ eV}$

Problem Solving Ability and Achievement in Physics: Effect of Mastery Learning Strategy Dr. Manoj Praveen G. & Prof. (Dr.) K. Sivarajan, 2020-12-25 Education has been considered as the most important input and the most potent instrument for the development of an individual. It is the key to national prosperity and welfare and that no investment is too great for it. It is evident that education has a very important role to play in the economic and social development of the country in the building up of the truly democratic society in the promotion of national integration and unity and above all for the transformation of individual in the endless pursuit of excellence and perfection. The students in a classroom have different socio-economic status, aptitudes, interests, attitudes etc. and among them have different IQ levels. In a classroom situation where the students are varied in learning levels i.e. average, below average and above average, most of the time teachers teach for the average neglecting the above average and below average in their hurry to finish the syllabus. In the classroom the above average feel bored and the slow learners remain passive and day by day become poor in the subject.

Probabilities in Physics Claus Beisbart, Stephan Hartmann, 2011-09-15 This volume provides a philosophical appraisal of probabilities in all of physics. It makes sense of probabilistic statements as they occur in the various physical theories and models and presents a plausible epistemology and metaphysics of probabilities.

Old and New Questions in Physics, Cosmology, Philosophy, and Theoretical Biology Alwyn Van der Merwe, 2012-12-06 Simply to say that this is a collection of essays in honor of the late Wolfgang Yourgrau 1908-1979 is to explain at least for the obviously many insiders the unusually wide ranging title of the present volume. In a Foreword to the Proceedings of the First International Colloquium focusing on logic, physical reality and history held at the University of Denver in May of 1966 under their leadership Wolfgang Yourgrau and Allen Breck wrote in an oblique reference to C. P. Snow: 'Indeed there are not two or three or four cultures there is only one culture our generation has lost its awareness of this. Historians, logicians, physicists all are banded in one common enterprise namely in their desire to weave an enlightened fabric of human knowledge. Augment if you will the foregoing categories of scholars with biologists, philosophers, cosmologists and theologians all of whom in addition to historians Wolfgang Yourgrau by dint of his inextinguishable enthusiasm and charismatic qualities assembled in Denver for the Second and Third International Colloquia in 1967 and 1974 respectively and a few other besides and one arrives at a statement of the credo which Yourgrau not only professed but consistently exemplified throughout his adult life.'

Physics in the Making A. Sarlemijn,M.J. Sparnaay,2013-10-22 H B G Casimir s life interests and works are intertwined with the important developments that have taken place in physics during this century This book was compiled by his friends and admirers in honour of his 80th birthday and concentrates mainly on Casimir s achievements in the field of

physics though without ignoring the peripheral areas of the history and philosophy of physics in which he was greatly interested. The book is divided into four parts. Part I describes Casimir's teachers: Ehrenfest, Bohr, and Pauli, and will be of general interest due to the key role which these physicists played in modern developments. The articles do give new facts and provide new insights into the history of modern physics. Part II consists of essays on recent developments in various areas of physics in which Casimir has taken an active interest, such as the modern concept of time, statistical foundations of electrodynamic theory, and field theory. The subjects covered in Part III have been selected because of Casimir's efforts in the industrial research area of physics. They cover past, present, and future expectations in research. Part IV contains an essay which discusses a philosophy of physics currently under discussion, which states that phenomenological laws prevail over fundamental ones for the purpose of experimental and technical physics. A second chapter in this final part gives a critical analysis of this philosophical view. The book is concluded by an appendix discussing Casimir's activities as a lecturer, written by a former student.

Essays on the Theory of Scientific Cognition Jerzy Kmita, 2013-12-20. This collection of essays is generally speaking a continuation of the themes that I have discussed in my book *Z metodologicznych problemów interpretacji humanistycznej*. I naturally, by continuation, I mean a resumption of certain questions that were already dealt with in the previous book. But I treated them rather summarily there, and now I will present them in greater detail. While doing so, I will have to face new issues which were ignored previously but which have to be solved at least tentatively in order to make it possible for me to elaborate more fully the suggestions made a few years ago. Along with this reason, a second one can be added to explain why in these *Essays on the Theory of Scientific Cognition* I tackle new problems treated nowhere more than marginally in *Z metodologicznych problemów interpretacji humanistycznej*. The current elaboration of my earlier incipient suggestions is based on the assumptions which may well serve as a starting point for an investigation of more general questions fundamental for epistemology and frequently formulated within its scope. To make at least a partial use of the opportunity I concentrated on some of these questions especially in the later chapters of this book.

Quantifiers, Questions and Quantum Physics Daniel Kolak, John Symons, 2007-11-10. Jaakko Hintikka is one of the most creative figures in contemporary philosophy. He has made significant contributions to virtually all areas of the discipline, from epistemology and the philosophy of logic to the history of philosophy and the philosophy of science. Part of the fruitfulness of Hintikka's work is due to its opening important new lines of investigation and new approaches to traditional philosophical problems. This volume gathers together essays from some of Hintikka's colleagues and former students exploring his influence on their work and pursuing some of the insights that we have found in his work. This book includes a comprehensive overview of Hintikka's philosophy by Dan Kolak and John Symons and an annotated bibliography of Hintikka's work.
