Shifting Standards Allan Franklin, 2018-11-24 In *Shifting Standards* Allan Franklin provides an overview of notable experiments in particle physics. Using papers published in *Physical Review*, the journal of the American Physical Society as his basis, Franklin details the experiments themselves, their data collection, the events witnessed, and the interpretation of results. From these papers, he distills the dramatic changes to particle physics experimentation from 1894 through 2009. Franklin develops a framework for his analysis, viewing each example according to exclusion and selection of data, possible experimenter bias, details of the experimental apparatus, size of the data set, apparatus, and number of authors, rates of data taking, along with analysis and reduction. Distinction between ideal and actual experiments, historical accounts of previous experiments, and personal comments and style. From Millikan's tabletop oil drop experiment to the Compact Muon Solenoid apparatus measuring approximately 4 000 cubic meters, not including accelerators, and employing over 2 000 authors, Franklin's study follows the decade-by-decade evolution of scale and standards in particle physics experimentation. As he shows, where once there were only one or two collaborators, now it literally takes a village. Similar changes are seen in data collection. In 1909, Millikan's data set took 175 oil drops, of which he used 23 to determine the value of e , the charge of the electron. In contrast, the 1988 E791 experiment using the Collider Detector at Fermilab, investigating the hadroproduction of charm quarks, recorded 20 billion events. As we also see, data collection took a quantum leap in the 1950s with the use of computers. Events are now recorded at rates as high as a few hundred per second, and analysis rates have progressed similarly. Employing his epistemology of experimentation, Franklin deconstructs each example to view the arguments offered and the correctness of the results. Overall, he finds that despite the metamorphosis of the process, the role of experimentation has remained remarkably consistent through the years, to test theories and provide a factual basis for scientific knowledge, to encourage new theories, and to reveal new phenomena.

Vacuum Structure and QCD Sum Rules M.A. Shifman, 1992-12-23 The method of the QCD sum rules was and still is one of the most productive tools in a wide range of problems associated with the hadronic phenomenology. Many heuristic ideas, computational devices, specific formulae, which are useful to theorists working not only in hadronic physics, have been accumulated in this method. Some of the results and approaches, which have originally been developed in connection with the QCD sum rules, can be and are successfully applied in related fields, such as supersymmetric gauge theories, nontraditional schemes of quarks and leptons, etc. The amount of literature on these and other more basic problems in hadronic physics has grown enormously in recent years. This volume presents a collection of papers, which

provide an overview of all basic elements of the sum rule approach and priority has been given to those works which seemed most useful from a pedagogical point of view Pulsed High Beta Plasmas D.E. Evans, 2013-10-22 Pulsed High Beta Plasmas contains the proceedings of the Third Topical Conference on High Beta Plasmas held in Oxfordshire UK on September 9 12 1975 The papers explore various aspects of pulsed high beta plasmas and cover topics such as reversed field pinches mass flow stabilization of plasma confined by helical magnetic fields cross field instabilities in theta pinch plasmas and soft X ray emitting plasma structures during the main neutron emission of plasma foci Experimental observations of the self reversal of a toroidal magnetic field in pinches are also presented This book is comprised of 98 chapters and begins with a discussion on experimental results concerning a high beta stellarator followed by a review of toroidal theta pinch theory The reader is then introduced to relaxation of toroidal discharges equilibrium and stability of a diffuse high beta Tokamak spectroscopic studies of high beta plasma and pulsed radiation from focused plasmas Subsequent chapters explore the compression and kink instabilities of reversed field pinches self inductance changes in a plasma focus interactions of high energy plasma clusters with a longitudinal magnetic field and electromagnetic implosion of large diameter liners The linear theta pinch as a 14 neutron source is also described This monograph will be a valuable source of information for physicists **Conference Papers Index** ,1980 Monthly Papers presented at recent meeting held all over the world by scientific technical engineering and medical groups Sources are meeting programs and abstract publications as well as questionnaires Arranged under 17 subject sections 7 of direct interest to the life scientist Full programs of meetings listed under sections Entry gives citation number paper title name mailing address and any ordering number assigned Quarterly and annual indexes to subjects authors and programs not available in monthly issues **Scientific and Technical Aerospace Reports** ,1974 *Journal of Science of the Hiroshima University* Hiroshima Daigaku,1941 **Monthly Catalog of United States Government Publications** ,1966
