Cross-Border Management Rongxing Guo, 2015-01-05 This book presents a new approach to management in an increasingly interactive world. In this context, the use of the word new has two meanings. The first relates to a new definition of borders which are natural, institutional, functional or mixed; the second concerns the fact that the book applies and where necessary develops analytical tools, methods and models that are different from those used in other similar books. The objectives of this book are to clarify whether existing management theories and methods can be effectively applied in an entity which can be defined as a sovereign country, a region, a community, a culture or a firm, as the latter increasingly interacts with the rest of the world to develop qualitative and quantitative methods to help leaders make optimal decisions for their entity and at the same time to maximize the positive or minimize the negative effects of those decisions on the rest of the world and to design workable cross border cooperation plans and conflict management schemes that allow policy makers to better cope with the challenges and problems posed by our increasingly interactive world.

Shaping the Future of the Fourth Industrial Revolution Klaus Schwab, Nicholas Davis, 2018-11-06 World Economic Forum Founder and Executive Chairman Klaus Schwab offers a practical companion and field guide to his previous book *The Fourth Industrial Revolution*. Today technology is changing everything: how we relate to one another, the way we work, how our economies and governments function and even what it means to be human. One need not look hard to see how the incredible advances in artificial intelligence, cryptocurrencies, biotechnologies and the internet of things are transforming society in unprecedented ways. But the Fourth Industrial Revolution is just beginning, says Schwab. And at a time of such tremendous uncertainty and such rapid change, he argues, it's our actions as individuals and leaders that will determine the trajectory our future will take. We all have a responsibility as citizens, businesses and institutions to work with the current of progress, not against it, to build a future that is ethical, inclusive, sustainable and prosperous. Drawing on contributions from 200 top experts in fields ranging from machine learning to geoengineering to nanotechnology to data ethics, Schwab equips readers with the practical tools to leverage the technologies of the future to leave the world better, safer and more resilient than we found it.
