The Physical Signature of Computation Neal G. Anderson, Gualtiero Piccinini, 2024 Anderson and Piccinini offer the most systematic rigorous and comprehensive account of computational implementation to date Their robust mapping account holds that the key for establishing that a computation is physically implemented is that the physical states bear neither more nor less information than the computational states they map onto

Physics of Radiation and Climate Michael A. Box, Gail P. Box, 2015-10-14 Our current climate is strongly influenced by atmospheric composition and changes in this composition are leading to climate change Physics of Radiation and Climate takes a look at how the outward flow of longwave or terrestrial radiation is affected by the complexities of the atmosphere's molecular spectroscopy This book examines the planet in

Sea Level Change and Maritime Boundaries Antoine Grima, 2023-06-23 Climate change is modifying in varying measure the coastal geography of States The phenomenon is not temporary but is expected to carry on during the 21st century and beyond A distinctive feature

of modern international law is the concept of maritime zones Each maritime area is subject to an intricate scheme of States rights and obligations Coastal geography is a fundamental component of a long standing method developed and agreed upon between States to establish the outward limits of these areas A feature of this method is the baseline In international law it is the only reference line from where the outward limits of maritime zones are measured There are clear rules on how this is established along a coast There is a concern amongst a number of States that rising sea water levels as a result of climate change may compel them to shift their baselines inward thus affecting the outward limits of their maritime zones It is clear that the stability of maritime boundaries is put into question and this may bring about serious political legal and economic repercussions This concern may also affect the outcome of dispute settlement procedures before a competent international court or tribunal the purpose of which is to resolve overlapping maritime claims Key questions emerge What is the role played by coastal geography in the legal regime determining the outward limits of maritime zones What are the consequences of changes to coastal geography To what extent are dispute settlement procedures before a Court or Tribunal immune from this concern Is international law able to address this If so in what way and what are its limits What can be done to resolve this

Green Finance in the European Union Marta Postuła, Mariusz Lipski, 2024-09-02 While global challenges continue to reshape the here and now public and corporate finance management needs to adapt quickly to increase the efficiency of institutions enterprises and policies to face our new reality There are very few publications that offer a comprehensive approach to the financing of environmental protection activities by the European Union This book

explores this topic from various angles and levels as well as highlighting the determinants that influence micro and macro level decisions in this area It presents an in depth and unique analysis of the sources of funding for environmental measures implemented by European Union institutions against the backdrop of national expenditure by Member States and analyses the plausibility of the adopted targets in the run up to 2050 in the context of the war in Ukraine and ad hoc energy policy solutions This book is a voice in an ongoing discussion among the community of practitioners and theoreticians on sources of financing for the energy transition to achieve independence from Russian sources in the quickest possible timeframe It demonstrates that environmental measures cannot occur without the financial participation of economic actors and financial institutions particularly the capital market and further underscores the scale of involvement in environmental projects as measured by the value of green loans and green bonds covered by European financial institutions The authors offer policy recommendations for financing activities related to environmental policy notably energy transition This book will appeal to scholars students and researchers of corporate finance banking strategic and public finance management as well as policymakers and practitioners involved in green finance investments

Social Capital, Resilience and Adaptation on Small Islands Jan Petzold, 2017-03-24 The book deals with the role of social capital regarding its potential to increase small islands adaptive capacity to climate change The case study of the Isles of Scilly UK shows how social structures can play a very important role for climate change adaptation It is argued that social features have to be understood in a non deterministic and potentially ambivalent manner according to their place specific geographical cultural and historical context Only then risk management and adaptation strategies can succeed and function in a sustainable way The findings have relevance for the further refinement of social capital theory and social emergence Combined with the perspective of resilience this approach is also relevant from a policy standpoint given that small islands have been identified as hotspots not only due to their vulnerability but also because they serve as examples for media and politics to advance the agenda of environmental protection

State Responsibility, Climate Change and Human Rights under International Law Margaretha Wewerinke-Singh, 2019-03-21 The last decade has witnessed an increasing focus on the relationship between climate change and human rights Several international human rights bodies have expressed concern about the negative implications of climate change for the enjoyment of human rights and the Paris Agreement is the first multilateral climate agreement to refer explicitly to states human rights obligations in connection with climate change Yet despite this there are still significant gaps in our understanding of the role of international human rights law in enhancing accountability for climate action or inaction As the Paris Agreement has shifted the focus of the climate change regime towards voluntary action and the humanitarian impacts of climate change are increasingly being felt around the world accountability for climate change has become an increasingly salient issue This book offers a timely and comprehensive analysis of the legal issues related to accountability for the human rights impact of climate change drawing on the state responsibility regime It explains when and where state action relating to climate change may amount to a violation of human rights and evaluates various avenues of legal redress available to victims The overall analysis offers a perceptive insight into the potential of innovative rights based climate actions to shape climate and energy policies around the world

Climate, Planetary and Evolutionary Sciences Guido Visconti, 2021-04-14 This book presents the result of an

innovative challenge to create a systematic literature overview driven by machine generated content Questions and related keywords were prepared for the machine to query discover collate and structure by Artificial Intelligence AI clustering The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary for example climate planetary and evolution sciences Springer Nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful The automatically generated literature summaries in this book are intended as a springboard to further discoverability They are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples It is important to us as a publisher to make the advances in technology easily accessible to our authors and find new ways of AI based author services that allow human machine interaction to generate readable usable collated research content

The Law of Coastal Adaptation Linda Schumacher, 2020-07-16 This work investigates law as an instrument to deal with the challenges of sea level rise As the two countries chosen as examples differ significantly in their adaptation strategies and the corresponding legal regulations the author presents general ideas on how any legal framework facing similar challenges could be improved In particular flood risk assessments coastal defences and

flood resistant design as well as spatial and land use planning are discussed including managed retreat Moreover conflicts as well as potential synergies of coastal adaptation and nature conservation are examined Due to the thorough analysis this book is not just an essential read for policymakers and researchers interested in the coastal area but climate change adaptation in general as many general findings are transferrable to other impacts

Integrative Study of the Mean Sea Level and Its Components Anny Cazenave,Nicolas Champollion, Frank Paul,Jérôme Benveniste,2017-04-28 This volume presents the most recent results of global mean sea level variations over the satellite altimetry era starting in the early 1990s and associated contributions such as glaciers and ice sheets mass loss ocean thermal expansion and land water storage changes Sea level is one of the best indicators of global climate changes as it integrates the response of several components of the climate system to external forcing factors including anthropogenic forcing and internal climate variability Providing long accurate records of the sea level at global and regional scales and of the various components causing sea level changes is of crucial importance to improve our understanding of climate processes at work and to validate the climate models used for future projections The Climate Change Initiative project of the European Space Agency has provided a first attempt to produce consistent and continuous space based records for several climate parameters observable from space among them sea level This book presents current knowledge of the sea level budget over the altimetry era and 20th century Previously published in Surveys in Geophysics Volume 38 Issue 1 2017
