Weller,2022-06-28 *Contributions from the United States National Herbarium* ,2002 Zooplankton of the Great Lakes
Mary D. Balcer,Nancy L. Korda,Stanley I. Dodson,1984 Researchers instructors and students will appreciate this compilation of detailed information on the crustacean zooplankton of the Great Lakes The authors have gathered data from more than three hundred sources and organized into a useful laboratory manual The taxonomic keys are easy to use suitable for both classroom and laboratory identifications Detailed line drawings are provided to help confirm the identification of the major species Zoologists limnologists hydrobiologists fish ecologists and those who study or monitor water quality will welcome this dependable new identification tool A concise summary of pertinent information on the ecology of these zooplankton is provided in the main body of the text A check list of all species reported from each of the Great Lakes and notes on the distribution and abundance of more than a hundred species were compiled from an extensive search of existing literature In addition the authors collected samples from several locations on Lake Superior in order to provide information on the abundance and life histories of the major crustacean species Patterns and Processes of Speciation in Ancient Lakes
Thomas Wilke,Risto Väinölä,Frank Riedel,2009-04-02 Ancient lakes are exceptional freshwater environments that have continued to exist for hundreds of thousands of years They have long been recognized as centres of biodiversity and hotspots of evolution During recent decades speciation in ancient lakes has emerged as an important and exciting topic in evolutionary biology The contributions in this volume deal with patterns and processes of biological diversification in three prominent ancient lake systems Of these the famous East African Great Lakes already have a strong tradition of evolutionary studies but the two other systems have so far received much less attention The exceptional biodiversity of the European sister lakes Ohrid and Prespa of the Balkans has long been known but has largely been neglected in the international literature until recently The rich biota and problems of its evolution in the two central lake systems on the Indonesian island of Sulawesi in turn have only lately started to draw scientific attention This volume aims at deepening the awareness of the unusual biological diversity in ancient lakes in general and of the role of these lakes as natural laboratories for the study of speciation and diversification in particular It should stimulate further research that will lead to a better understanding of key evolutionary processes in these lakes and to knowledge that might help in mitigating the deterioration of their diversity in the future
