, 1990 **Current Index to Journals in Education**, 1999 *Teaching Science and Investigating Environmental Issues with Geospatial Technology* James MaKinster, Nancy Trautmann, Michael Barnett, 2013-11-05 The emerging field of using geospatial technology to teach science and environmental education presents an excellent opportunity to discover the ways

in which educators use research grounded pedagogical commitments in combination with their practical experiences to design and implement effective teacher professional development projects. Often missing from the literature are in depth explicit discussions of why and how educators choose to provide certain experiences and resources for the teachers with whom they work and the resulting outcomes. The first half of this book will enable science and environmental educators to share the nature and structure of large scale professional development projects while discussing the theoretical commitments that undergird their work. Many chapters will include temporal aspects that present the ways in which projects change over time in response to evaluative research and practical experience. In the second half of the book faculty and others whose focus is on national and international scales will share the ways in which they are working to meet the growing needs of teachers across the globe to incorporate geospatial technology into their science teaching. These efforts reflect the ongoing conversations in science education geography and the geospatial industry in ways that embody the opportunities and challenges inherent to this field. This edited book will serve to define the field of teacher professional development for teaching science using geospatial technology. As such it will identify short term and long term objectives for science environmental and geography educators involved in these efforts. As a result this book will provide a framework for future projects and research in this exciting and growing field.
