Platform Security Engineering Guide:

Security Engineering Ross Anderson, 2020-12-22 Now that there's software in everything how can you make anything secure Understand how to engineer dependable systems with this newly updated classic In Security Engineering A Guide to Building Dependable Distributed Systems Third Edition Cambridge University professor Ross Anderson updates his classic textbook and teaches readers how to design implement and test systems to withstand both error and attack This book became a best seller in 2001 and helped establish the discipline of security engineering By the second edition in 2008 underground dark markets had let the bad guys specialize and scale up attacks were increasingly on users rather than on technology The book repeated its success by showing how security engineers can focus on usability Now the third edition brings it up to date for 2020 As people now go online from phones more than laptops most servers are in the cloud online advertising drives the Internet and social networks have taken over much human interaction many patterns of crime and abuse are the same but the methods have evolved Ross Anderson explores what security engineering means in 2020 including How the basic elements of cryptography protocols and access control translate to the new world of phones cloud services social media and the Internet of Things Who the attackers are from nation states and business competitors through criminal gangs to stalkers and playground bullies What they do from phishing and carding through SIM swapping and software exploits to DDoS and fake news Security psychology from privacy through ease of use to deception The economics of security and dependability why companies build vulnerable systems and governments look the other way How dozens of industries went online well or badly How to manage security and safety engineering in a world of agile development from reliability engineering to DevSecOps The third edition of Security Engineering ends with a grand challenge sustainable security As we build ever more software and connectivity into safety critical durable goods like cars and medical devices how do we design systems we can maintain and defend for decades Or will everything in the world need monthly software upgrades and become unsafe once they stop

Trusted Computing Platforms

Sean W. Smith, 2013-12-11 How can one trust computation taking place at a remote site particularly if a party at that site might have motivation to subvert this trust In recent years industrial efforts have advanced the notion of a trusted computing platform as a building block Through a conspiracy of hardware and software magic these platforms attempt to solve this remote trust problem to preserve various critical properties against various types of adversaries However these current efforts are just points on a larger continuum which ranges from earlier work on secure coprocessor design and applications through TCG to recent academic developments Without wading through stacks of theses and research literature the general computer science reader cannot see this big picture Trusted Computing Platforms Design and Applications fills this gap Starting with early prototypes and proposed applications this book surveys the longer history of amplifying small amounts of hardware security into broader system security and reports real case study experience with security architecture and applications on multiple types of platforms The author examines the theory design implementation of the IBM 4758 secure coprocessor platform and discusses real case study applications that exploit the unique capabilities of this platform The author discusses how these foundations grow into newer industrial designs and discusses alternate architectures and case studies of applications that this newer hardware can enable The author closes with an examination of more recent cutting edge experimental work in this area Trusted Computing Platforms Design and Applications is written for security architects application designers and the general computer scientist interested in the evolution and uses of this emerging technology
