Volkan, 2015-02-28 Instructional quality can make or break the learning experience especially in digital environments where the expressional nuances of interpersonal communication are lost The most effective distance education instructors and experts are those who recognize the educational needs of students and are able to address those needs through creative use of the technological tools available to them Identification Evaluation and Perceptions of Distance Education Experts explores the current and future trends needs and priorities that affect the development of distance education in a postmodern world This premier reference work will be of significance to those interested in online learning teaching and training communication and education across multiple sectors such as universities colleges schools profit non profit e organizations and e commerce **Cellular and molecular mechanisms of motor neuron death in amyotrophic lateral sclerosis** Ricardo Tapia, 2015-02-11 Amyotrophic lateral sclerosis ALS which was described since 1869 by Jean Martin Charcot is a devastating neurodegenerative disease characterized by the selective and progressive loss of upper and lower motor neurons of the cerebral cortex brainstem and the spinal cord The cognitive process is not affected and is not merely the result of aging because may occur at young ages The only known cause of the disease is associated with genetic mutations mainly in the gene encoding superoxide dismutase 1 familial ALS whereas there is no known cause of the sporadic form of ALS SALS which comprises 90% of cases Both ALS types develop similar histopathological and clinical characteristics and there is no treatment or prevention of the disease Because effective treatments for ALS as for other neurodegenerative

diseases can only result from the knowledge of their cellular and molecular pathophysiological mechanisms research on such mechanisms is essential Although progress in neurochemical physiological and clinical investigations in the last decades has identified several mechanisms that seem to be involved in the cell death process such as glutamate mediated excitotoxicity alterations of inhibitory circuits inflammatory events axonal transport deficits oxidative stress mitochondrial dysfunction and energy failure the understanding of the origin and temporal progress of the disease is still incomplete and insufficient Clearly there is a need of further experimental models and approaches to discern the importance of such mechanisms and to discover the factors that determine the selective death of motor neurons characteristic of ALS in contrast to other neurodegenerative diseases such as Parkinson s and Alzheimer s disease Whereas studies in vitro in cell cultures tissue slices or organotypic preparations can give useful information regarding cellular and molecular mechanisms the experiments in living animal models obviously reflect more closely the situation in the human disease provided that the symptoms and their development during time mimics as close as possible those of the human disease It is necessary to correlate the experimental findings in vitro with those in vivo as well as those obtained in genetic models with those in non genetic models aiming at designing and testing therapeutic strategies based on the results obtained *The Saturday Evening Post* ,1910

James K. Feathers,2020-12-14 Trapped charge dating is a commonly used chronological tool in Earth Sciences and Archaeology The two principle methods are luminescence dating and electron spin resonance Both are based on stored energy produced by the absorption of natural radioactivity in common minerals such as quartz and feldspars and in some

biological materials such as tooth enamel Methodological developments in the last 20 years have substantially increased the accuracy and precision of these methods This compilation offers a taste of the recent research into both method and applications
