

Sectors – ARC LENGTH Example 2

L = Length of Arc around Pizza

We only have 300° out of the full 360° of the circle.

This fraction is 300 / 360

The large remaining part of this circle is called a "MAJOR Sector".

All the way around a Circle is the "Circumference" of

$$C = \pi \times R \times 2 \quad \text{where } \pi = 3.1416$$

$$L = 300 / 360 \text{ of a full circle}$$

$$L = 300/360 \times (\pi \times R \times 2)$$

$$L = 0.8333 \times (3.1416 \times 10 \times 2)$$

$$L = 52.4 \text{ cm} \quad \checkmark$$

Mathematical Modelling and Applications Gloria Ann Stillman, Werner Blum, Gabriele Kaiser, 2017-11-05 This volume documents on going research and theorising in the sub field of mathematics education devoted to the teaching and learning of mathematical modelling and applications. Mathematical modelling provides a way of conceiving and resolving problems in the life world of people whether these range from the everyday individual numeracy level to sophisticated new problems for society at large. Mathematical modelling and real world applications are considered as having potential for multi disciplinary work that involves knowledge from a variety of communities of practice such as

those in different workplaces e.g. those of educators, designers, construction engineers, museum curators and in different fields of academic endeavour e.g. history, archaeology, mathematics, economics. From an educational perspective, researching the development of competency in real world modelling involves research situated in crossing the boundaries between being a student engaged in modelling or mathematical application to real word tasks in the classroom, being a teacher of mathematical modelling in or outside the classroom or bridging both and being a modeller of the world outside the classroom. This is the focus of many of the authors of the chapters in this book. All authors of this volume are members of the International Community of Teachers of Mathematical Modelling (ICTMA), the peak research body into researching the teaching and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace.

A Multi Objective Programming Approach to Solve Integer Valued Neutrosophic Shortest Path Problems Ranjan Kumar, S. A. Edalatpanah, Sripati Jha, S. Broumi, Ramayan Singh, Arindam Dey, Neutrosophic NS set hypothesis gives another way to deal with the vulnerabilities of the shortest path problems SPP. Several researchers have worked on fuzzy shortest path problem FSPP in a fuzzy graph with vulnerability data and completely different applications in real world eventualities. However, the uncertainty related to the inconsistent information and indeterminate information isn't properly expressed by fuzzy set. The neutrosophic set deals these forms of uncertainty. This paper presents a model for shortest path problem with various arrangements of integer valued trapezoidal neutrosophic INVTpNS and integer valued triangular neutrosophic INVTrNS. We characterized this issue as Neutrosophic Shortest way problem NSSPP. The established linear programming LP model solves the classical SPP that consists of crisp parameters. To the simplest of our data, there's no multi objective applied mathematics approach in literature for finding the Neutrosophic shortest path problem NSSPP.
