Eternal Designs Dr. Octavian Caius Obeada. The book explores Biblical creation narratives portraying humanity as reflections of the divine and juxtaposes these with scientific theories such as the Big Bang and the emergence of life from primordial conditions. It delves into the Last Universal Common Ancestor (LUCA) concept. It examines various scientific theories on life's origins and the complexities and functions of prokaryotic and eukaryotic cells. The narrative also highlights the mathematical elegance in human anatomy such as the Golden Ratio and Fibonacci sequences. It investigates the systems that maintain human balance and the marvels of brain functions. Throughout the book, I weave together a tapestry of scientific knowledge and theological inquiry. From the cellular foundations that play vital roles in natural ecosystems to the brain's remarkable capacities for memory and healing, the book presents a holistic view of life's complexity and beauty. It encourages readers to appreciate the harmony between scientific discovery and spiritual understanding, offering profound insights into our place in the universe and the ongoing

interplay between creation and inquiry The PAPERBACK version can be found on Amazon <https://amzn.to/446PNJF>
