When we agreed to share all of our preparation of exercises in sampling theory to create a book we were not aware of the scope of the work. It was indeed necessary to compose the information type out the compilations standardise the notations and correct the drafts. It is fortunate that we have not yet measured the importance of this project for this work probably would never have been attempted. In making available this collection of exercises we hope to promote the teaching of sampling theory for which we wanted to emphasise its diversity. The exercises are at times purely theoretical while others are originally from real problems enabling us to approach the sensitive matter of passing from theory to practice that so enriches survey statistics. The exercises that we present were used as educational material at the cole Nationale de la Statistique et de l'Analyse de l'Information ENSAI where we had successively taught sampling theory. We are not the authors of all the exercises. In fact some of them are due to Jean Claude Deville and Laurent Wilms. We thank them for allowing us to reproduce their exercises. It is also possible that certain exercises had been initially conceived by an author that we have not identified. Beyond the contribution of our colleagues and in all cases we do not consider ourselves to be the lone authors of these exercises they actually form part of a common heritage from ENSAI that has been enriched and improved due to questions from students and the work of all the demonstrators of the sampling course at ENSAI. **Sampling techniques** W.
