**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CON) and an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week. The HR and HRR were measured at rest and during submaximal and maximal exercise at baseline and after 12 weeks. The EX group showed a significant decrease in HR at rest and during submaximal and maximal exercise compared to the CON group. The HRR also showed a significant increase in the EX group compared to the CON group. The results of this study suggest that a 12-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

When you install your T-Value One Connection, improper installation of all four screws (52 connections for One Connection®) will affect the overall health, safety and life of the system. Proper ventilation is critical to maintain proper ventilation. Failure to maintain proper ventilation may result in the following problems with the product:

- When a producer's price for the output rises or falls, it must adjust its output accordingly. For example, if the price of the output rises, the producer will increase its output. This is because the producer's marginal revenue (MR) curve shifts up, and the producer will increase its output until MR equals marginal cost (MC).
