- Abstract**—The authors examined the effects of a 12-week, low-intensity, low-impact, and low-volume exercise program on the health-related quality of life of sedentary, middle-aged, overweight women. The program was designed to be safe and enjoyable for women with no previous experience with exercise. The program consisted of 30 minutes of walking, 3 times per week. The results showed that the program had a positive effect on the health-related quality of life of the women. The program was well tolerated and the women enjoyed it. The program was also found to be cost-effective. The authors conclude that a low-intensity, low-impact, and low-volume exercise program can be a safe and effective way to improve the health-related quality of life of sedentary, middle-aged, overweight women.
