Physical Science Exemplar Paper Memo 24:

How We Teach Science John L. Rudolph, 2019-06-01 Despite an enduring belief that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and determine how science is perceived by the public

The Atomic West Bruce W. Hevly, John M. Findlay, 2011-12-01 The Manhattan Project the World War II race to produce an atomic bomb transformed the entire country in myriad ways but it did not affect each region equally Acting on an enduring perception of the American West as an empty place the U S government located a disproportionate number of nuclear facilities particularly the ones most likely to spread pollution in western states The Manhattan Project manufactured plutonium at Hanford Washington designed and assembled bombs at Los Alamos New Mexico and detonated the world's first atomic bomb at Alamogordo New Mexico on June 16 1945 In the years that followed the war the U S Atomic Energy Commission selected additional western sites for its work Many westerners initially welcomed the atom Like federal officials they too regarded their region as empty or underdeveloped Facilities to make test and base atomic weapons sites to store nuclear waste and even nuclear power plants were regarded as assets By the 1960s and 1970s however regional attitudes began to change At a variety of locales ranging from Eskimo Alaska to Mormon Utah westerners devoted themselves to resisting the atom and its effects on their environments and communities Just as the atomic age had dawned in the American West so its artificial sun began to set there The Atomic West brings together contributions from several disciplines to explore the impact on the West of the development of atomic power from wartime secrecy and initial postwar enthusiasm to public doubts and protest in the 1970s and 1980s An impressive example of the benefits of interdisciplinary studies on complex topics The Atomic West advances our understanding of both regional history and the history of science and does so with human communities as a significant focal point The book will be of special interest to students and experts on the American West environmental history and the history of science and technology

NASA Technical Memorandum, 1994

Leisure and Pleasure Caroline Daley, 2013-10-01 This exploration of an unexpected aspect of New Zealand social history examines the human body at leisure in the years 1900 growing ideas about fitness health and exercise the rise of beauty contests the culture of the beach and the pool nudism and children's play and the appearance of playgrounds The central aim is to explore how bodies men's women's and children's were shaped and displayed through various leisure pursuits in 20th century New Zealand

The Chemical News and Journal of Physical Science, 1915

Scientists in the Classroom J. Rudolph, 2002-05-02 During the 1950s leading American scientists embarked on an unprecedented project to remake high school science education Dissatisfaction with the soft school curriculum of the time advocated by the professional education establishment and concern over the growing technological sophistication of the Soviet Union led government officials to encourage a handful of elite research scientists fresh from their World War II

successes to revitalize the nations science curricula In *Scientists in the Classroom* John L Rudolph argues that the Cold War environment long neglected in the history of education literature is crucial to understanding both the reasons for the public acceptance of scientific authority in the field of education and the nature of the curriculum materials that were eventually produced Drawing on a wealth of previously untapped resources from government and university archives Rudolph focuses on the National Science Foundation supported curriculum projects initiated in 1956 What the historical record reveals according to Rudolph is that these materials were designed not just to improve American science education but to advance the professional interest of the American scientific community in the postwar period as well Kuhn's Structure of Scientific Revolutions at Fifty Robert J. Richards, Lorraine Daston, 2016-03-25 Thomas S Kuhn's *The Structure of Scientific Revolutions* was a watershed event when it was published in 1962 upending the previous understanding of science as a slow logical accumulation of facts and introducing with the concept of the paradigm shift social and psychological considerations into the heart of the scientific process More than fifty years after its publication Kuhn's work continues to influence thinkers in a wide range of fields including scientists historians and sociologists It is clear that *The Structure of Scientific Revolutions* itself marks no less of a paradigm shift than those it describes In Kuhn's *Structure of Scientific Revolutions at Fifty* leading social scientists and philosophers explore the origins of Kuhn's masterwork and its legacy fifty years on These essays exhume important historical context for Kuhn's work critically analyzing its foundations in twentieth century science politics and Kuhn's own intellectual biography his experiences as a physics graduate student his close relationship with psychologists before and after the publication of *Structure* and the Cold War framework of terms such as world view and paradigm The Changing University Dorothy Shore Zinberg, 1991-05-31 This collection of papers was written for a NATO Advanced Research Workshop held at Harvard University in March 1990 The title *The Changing University and the Education of Scientists and Engineers: An International Workshop* broad as it is does not convey the sweep of data information opinions and suggestions for future research and policy choices that were crowded into two and a half days of formal presentations mealtime discussions and teatime chats The proposal for the workshop grew out of a research project I had carried out that explored the policies governing the education of foreign science and engineering students S E s in several industrialized countries and of two countries that send large numbers of S E students abroad the People's Republic of China PRC and Japan see chapter 7 In research visits to these countries as well as to France the United Kingdom West Germany and within the United States I was struck by the similarity of issues that were raised One was the concern that there would not be enough well trained scientists and engineers to meet the constantly increasing demand for them Government officials industrialists and educators repeatedly stressed that a well educated and motivated work force was essential for their economies national security and for society as a whole Many of those interviewed mentioned that universities are undergoing rapid systemic changes as governments and industry are calling on them to provide human resources and intellectual capital *Eternal Vigilance?*

Christopher Andrew, Rhodri Jeffreys-Jones, 2013-09-13 *Eternal Vigilance* seeks to offer reinterpretations of some of the major established themes in CIA history such as its origins foundations its treatment of the Soviet threat the Iranian revolution and the accountability of the agency The book also opens new areas of research such as foreign liaison relations with the scientific community use of scientific and technical research and economic intelligence The articles are both by well known scholars in the field and young researchers at the beginning of their academic careers Contributors come almost equally from both sides of the Atlantic All draw to varying degrees on recently declassified documents and newly available archives and as the final chapter seeks to show all point the way to future research

The Twilight Years Richard Overly, 2010-11-30 From a leading British historian the story of how fear of war shaped modern England By the end of World War I Britain had become a laboratory for modernity Intellectuals politicians scientists and artists among them Arnold Toynbee Aldous Huxley and H G Wells sought a vision for a rapidly changing world Coloring their innovative ideas and concepts from eugenics to Freud s unconscious was a creeping fear that the West was staring down the end of civilization In their home country of Britain many of these fears were unfounded The country had not suffered from economic collapse occupation civil war or any of the ideological conflicts of inter war Europe Nevertheless the modern era s promise of progress was overshadowed by a looming sense of decay and death that would deeply influence creative production and public argument between the wars In *The Twilight Years* award winning historian Richard Overly examines the paradox of this period and argues that the coming of World War II was almost welcomed by Britain s leading thinkers who saw it as an extraordinary test for the survival of civilization and a way of resolving their contradictory fears and hopes about the future
