*Science Is Not What You Think* Henry H. Bauer, 2017-06-16 This book discusses the ways in which science the touchstone of reliable knowledge in modern society changed dramatically in the second half of the 20th century becoming less trustworthy through conflicts of interest and excessive competitiveness Fraud became common enough that organized efforts to combat it now include a federal Office of Research Integrity Competent minority opinions are sometimes thereby suppressed with the result that policy makers the media and the public are presented with biased or incomplete information Evidence tending to challenge established theories is sometimes rejected without addressing its substance While most would agree in the abstract that science can go wrong few would consider despite interesting contrary evidence that official consensus about the origins of the universe or the causes of global warming might be mistaken

*The Many-Sidedness of George Minchin Minchin* Richard Hornsey, 2023-09-29 This book

is the first complete biography of George Minchin 1845-1914 professor of applied mathematics at the Royal Indian Engineering College. Minchin's extraordinary range of accomplishments offers a unique inside view of the major technological and educational developments of late nineteenth century Britain. The scientific community's excitement during the early days of electromagnetic theory, wireless telegraphy and x-rays are revealed by Minchin's letters to eminent friends, notably the Maxwellians Oliver Lodge and George Francis Fitzgerald. This book also traces Minchin's little-known pioneering work on photoelectricity which led to the first electrical measurements of starlight and laid the foundations for solar cells and television. Minchin's mathematical textbooks were praised for their lucidity and his advanced pedagogical thinking underpinned his lifelong work on reforming science education. He explained scientific concepts for a general audience using science-fiction poetry and critiqued contemporary society in sharp and humorous satires. These works provide fresh perspectives on the place of science in Victorian society. This book is for anyone fascinated by the late nineteenth century revolution in electrical technologies. This is also a valuable read for historians of science and for those interested in technical education and science and society in Victorian Britain.

Sport Development in the United States Peter Smolianov, Dwight Zakus, Joseph Gallo, 2014-09-15. The development of both elite high performance sport and mass participation grassroots level sport are central concerns for governments and sports governing bodies. This important new study is the first to closely examine the challenges and opportunities for sports development in the United States, a global sporting giant with a unique market-driven sporting landscape. Presenting an innovative model of integrated sports development, the book explores the inter-relationship between elite and mass sport across history, drawing on comparative international examples from Australia to the former USSR and Eastern bloc countries. At the heart of the book is an in-depth empirical study of three traditional and emerging sports in the US: tennis, soccer and rugby, that offer important lessons on the development of elite sport, methods for increasing participation and the establishment of new sports in new markets. No other book has attempted to model sports development in the United States in such depth before. Therefore, this should be essential reading for all students, researchers, administrators or policy makers with an interest in sports development, sports management, sports policy or comparative international sport studies.

Climate Change and Agricultural Development Udaya Sekhar Nagothu, 2016-07-15. Two of the greatest current challenges are climate change and variability and food security. Feeding nine billion people by 2050 will require major efforts aimed at climate change adaptation and mitigation. One approach to agriculture has recently been captured by the widely adopted term of Climate Smart Agriculture (CSA). This book not only explains what this entails but also presents practical on-the-ground studies of practices and innovations in agriculture across a broader spectrum including agroecology and conservation agriculture in less developed countries. It is shown that CSA is not a completely new science and a number of its recommended technologies have been used for some time by local farmers all over the world. What is relevant and new is the approach to exploit their adaptation and mitigation potential. However, a major limitation is the lack of

evidence based knowledge that is necessary for policy makers to prepare strategies for adaptation and mitigation This book assembles knowledge of CSA agroecology and conservation agriculture and perspectives from different regions of the world to build resilient food systems The first part analyzes the concept opportunities and challenges and provides a global perspective drawing particularly on studies from Africa and Asia The second part of the book showcases results from various studies linked to soil water and crop management measures from an ongoing program in India as well as experiences from other regions The third section assesses the needs for an enabling policy environment mainstreaming gender and some final recommendations for up scaling and or out scaling innovations
