Mobile Service Robotics Mohammad Osman Tokhi, Krzysztof Kozlowski, Gurvinder S. Virk, 2014-07-07. Interest in control of climbing and walking robots has remarkably increased over the years. Novel solutions of complex mechanical systems such as climbing, walking, flying, and running robots with different kinds of locomotion and the technologies that support them and their applications are the evidence of significant progress in the area of robotics. Supporting technologies include the means by which robots use to sense, model, and navigate through their environments and, of course, actuation and control technologies. Human interaction, including exoskeletons, prostheses, and orthoses, as well as service robots, are increasingly active, important, pertinent areas of research. In addition, legged machines and tracked platforms with software architecture seem to be currently the research idea of most interest to the robotics community. *Robotics and Flexible Manufacturing Technologies* Robert U. Ayres, 1985 Intelligent Scheduling of Robotic Flexible Assembly Cells Khalid Karam Abd, 2015-11-08. This book focuses on the design of Robotic Flexible Assembly Cell (RFAC) with multi robots. Its main contribution consists of a new effective strategy for scheduling RFAC in a multi-product assembly environment in which dynamic status and multi-objective optimization problems occur. The developed strategy, which is based on a combination of advanced solution approaches such as simulation, fuzzy logic system modeling, and the Taguchi optimization method, fills an important knowledge gap in the current literature and paves the way for future research towards the goal of employing flexible assembly systems as effectively as possible despite the complexity of their scheduling. **Industry Applications Society ... IEEE/IAS International Conference on Industrial Automation and Control (IA&C ...)**, 1995
