Laboratory Manual of Physical Chemistry Albert Watson Davison, Henry Sjoerd van Klooster, 1922 *Laboratory Manual of Physical Chemistry (Classic Reprint)* Albert Watson Davison, 2015-07 Excerpt from *Laboratory Manual of Physical Chemistry* In presenting this manual of laboratory exercises in physical chemistry the authors have been prompted by a threefold object first to facilitate the task of the instructor in handling large classes of students beginning a course of practical physical chemistry second to assist the student in recording his observations in a clear and comprehensive manner and third to present such quantitative exercises as will be particularly desirable in the training of students of engineering In view of the fact that there are as a rule available for laboratory work not more than two and one half hours at a time it has been found desirable to have the different pieces of apparatus set up beforehand by the instructor To this end each experiment is preceded by an exact list of the apparatus and chemicals needed It is believed that this will materially aid the instructor in assembling the necessary equipment At the Rensselaer Polytechnic Institute the laboratory course immediately follows the completion of the theoretical course in physical chemistry and students are thus prepared to take up the study of any experiment herein listed It is therefore found practical to prepare the equipment for one or two units of each exercise before the laboratory course starts and to shift the student successively from one experiment to another In this way an excessive amount of preparatory work is avoided Many of the experiments have been in use in their present form at this Institute and elsewhere for a number of years and have been found to be thoroughly satisfactory Directions have been made
