

Chapter 11 & 12 Study Guide: Motion & Forces Answer Key

Chapter 11: Motion

1. Define (include the formula and circle diagram for calculating speed, velocity, and acceleration):
 - a. Distance: The length between two objects or the length of the path traveled.
 - b. Speed: distance traveled by the time it took to travel. **speed = distance/time**
 - c. Velocity: distance traveled by the time it took to travel and the direction that you traveled in. **velocity = distance/time**
 - d. Acceleration: change in velocity or velocity over time. **acceleration = $\frac{velocity_{final} - velocity_{initial}}{time}$**
2. What is the speed of an object at rest? **0 m/s**
3. The difference between speed and velocity is that velocity includes **direction**.
4. The SI unit for distance is **meter (m)**.
5. The SI unit for speed or velocity is **meter per second (m/s)**.
6. The SI unit for acceleration is **meter per second squared (m/s²)**.
7. On a **distance-time** graph, what does the slope tell you? **Speed or Velocity**
8. On a **speed-time** graph, what does the slope tell you? **Acceleration**

Chapter 12: Forces

9. Describe (what does it say and what is it commonly called)
 - a. Newton's First law of Motion: **Also known as "Law of Inertia". Object in motion stays in motion and an object at rest stays at rest UNLESS acted upon by a NET FORCE.**
 - b. Newton's Second law of Motion: **$F = m \times a$. Force equals the product of an object's mass and acceleration. (Acceleration is equal to the force and inversely proportional to mass)**
 - c. Newton's Third law of Motion: **Also known as "Action/Reaction Law". For every action there is an equal and opposite reaction.**
10. Give an example for each of Newton's laws.
 - a. Newton's First law of Motion: **boulder won't move unless something pushes on it, and the moon won't stop rotating unless a force acts on it.**
 - b. Newton's Second law of Motion: **it takes more force to accelerate a school bus than a toy car.**
 - c. Newton's Third law of Motion: **my foot pushed on the ball (action force), the ball pushes back (reaction force) and fly's forward (resulting net force). OR when you sit in the desk you push down on the desk and the desk pushes on you but they are balanced so there is NO CHANGE in motion.**
11. Define and give an example of each of the following terms.

Definition	Example
a. Friction: force that opposes motion.	a. Friction: heat when rubbing hands together.
b. Static Friction: friction that prevents object from moving.	b. Static Friction: pushing against a dresser that won't move.
c. Sliding Friction: friction that occurs between objects sliding past each other.	c. Sliding Friction: going down a slide; dresser sliding across the floor.
d. Rolling Friction: friction that occurs between object rolling against another object.	d. Rolling Friction: roller skates on pavement; car driving on the road
e. Fluid Friction: friction that occurs in a fluid (Examples of Fluid: water, quicksand, air.)	e. Fluid Friction: falling leaves; fish swimming in water

 medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical
 acumen are commonly found Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as
 well as awareness of the appropriate diagnostic tests and therapeutic interventions Because this knowledge base crosses
 many different disciplines introduction to caring for the intensive care patient while exciting may also be intimidating This
 textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to
 the patient both logical and successful The book contains three components 1 description of the procedural tasks commonly
 performed for the critically ill patient 2 explanation of the most common pathophysiologic states encountered and 3
 description of specific disease entities with details of their differential diagnosis diagnostic strategy and therapeutic plan
 This book also uses several educational approaches that we have found useful in our own teaching sessions and prior
 textbooks Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy As an additional
 study aid margin notes highlight important teaching points and facilitate easy review of chapter content To consolidate the
 principles outlined in each chapter review questions with full text explanations are provided at the end of each chapter All
 these elements help reinforce the most important messages for the reader **What Are They Thinking?** Page Keeley
 , 2014-04-01 Children are continually developing ideas and explanations about their natural world Some of these ideas are
 consistent with the science children are taught others differ significantly from scientific explanations Many of these ideas will
 follow students into adulthood if they remain hidden from the teacher and unresolved The challenge for teachers is to find
 ways to elicit these ideas and then use appropriate strategies to move students learning forward Page Keeley author of the
 bestselling NSTA Press series *Uncovering Student Ideas in Science* You don't have to become a mind reader to understand
 the ideas young students bring to science class This collection will help you draw out and then recognize what students know
 or think they know about the natural world *What Are They Thinking?* is a compendium of 30 Formative Assessment Probes
 columns from NSTA's elementary journal *Science and Children* Each chapter provides A sample formative assessment probe
 a set of interesting questions that root out commonly held often mistaken ideas Geared to elementary students probe topics
 range from why you can see the Moon in the daytime to where water goes when it evaporates to what is or isn't a rock Your
 students answers to each probe will help you take a step back and figure out how to guide them from where they are
 conceptually to where they need to be Accompanying teacher notes easy to grasp explanations and advice that tell you how

to encourage evidence based discussion and then monitor students understanding A bonus feature a set of study group questions written especially for this compendium by award winning author Page Keeley So forget about acquiring psychic powers Instead turn to What Are They Thinking to transform both your teaching and your students learning about science

Physical Science Chapter 12 Forces And Motion Study Guide Book Review: Unveiling the Power of Words

In some sort of driven by information and connectivity, the power of words has be evident than ever. They have the ability to inspire, provoke, and ignite change. Such could be the essence of the book **Physical Science Chapter 12 Forces And Motion Study Guide**, a literary masterpiece that delves deep into the significance of words and their impact on our lives. Compiled by a renowned author, this captivating work takes readers on a transformative journey, unraveling the secrets and potential behind every word. In this review, we shall explore the book is key themes, examine its writing style, and analyze its overall impact on readers.
