Arthur C. Petersen, 2023-11-28 *Climate God and Uncertainty* moves beyond Bruno Latour's thought to understand what climate change means for philosophical anthropology and wider culture What are for example the philosophical implications of climate change and its associated uncertainties Referring mainly to works by Latour William James and Heinrich Rickert Petersen develops transcendental naturalism to reinterpret the interface between science and politics in the context of climate change He highlights for instance issues such as the religious disenchantment of nature the scientific disbelief in a plurality of value laden perspectives and the disregard for non modern worldviews in politics In developing its argument the book makes a methodological intervention on the sort of naturalism that guides both Latour's work and a large part of the academic field called science and religion Praise for *Climate God and Uncertainty* The challenges of a changing climate raise

disturbing questions about being human in the world ones that cannot adequately be answered through scientific inquiry In this original interrogation and extension of the work of Bruno Latour Petersen constructs a philosophical position that takes seriously the realities of a changing natural world the human search to ground our sense of value and the possibility of God Climate God and Uncertainty is an exciting new addition to the small but growing literature on climate change religion and philosophy Mike Hulme University of Cambridge This innovative and exciting work explores the rich potential of transcendental naturalism as a bridge between science and religion Drawing on the work of William James Heinrich Rickert and Bruno Latour Petersen maps out a fresh approach that goes beyond current accounts of naturalism opening up a deeply satisfying account of our engagement with the natural world Alister McGrath Emeritus Andreos Idreos Professor of Science and Religion University of Oxford How to live with the pervasive reality of uncertainty and a plurality of perspectives in science religion and politics without playing down the sciences and our responsibilities The transcendental naturalism Arthur Petersen articulates in this book respects science while leaving room for other elements wonder judgements and values and the way we construct provisional models of reality These issues are especially acute in the context of climate change when we face the interplay of science and policy Petersen stresses the importance of imagination to articulate meaning and of recognising a plurality of value laden perspectives striving for responsible action and sensitivity to that which may escape planning and policy This book can be read fruitfully in at least two ways as a highly relevant reflection on religion and science in the face of climate change and as a profound philosophical analysis of pluralism and provisionality and hence of living with uncertainty Willem B Drees Professor Emeritus of Philosophy of Religion and Ethics Leiden University and of Philosophy of the Humanities Tilburg University

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination

system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate. This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics. Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers, the quality of careers advice in schools and the importance of practical science in schools.

Bourdieu for Educators Fenwick W. English, Cheryl L. Bolton, 2015-01-06

Educational change and reform on a larger scale: Bourdieu for Educators. Policy and Practice brings the revolutionary research and thinking of Pierre Bourdieu 1930-2002 of France to public educational leaders in North America, Canada, Australia and the U.K. This text brings Bourdieu's work into the arena of elementary and secondary educational reform and change and offers policy research and practice discussions. Authors Fenwick W. English and Cheryl L. Bolton use Bourdieu to challenge the standards movement in different countries, the current vision of effective management and the open market notion connecting pay to performance. The text shows that connecting pay to performance won't improve education for the poorest group of school students in the U.S., Canada or the U.K. regardless of how much money is spent trying to erase the achievement gap. The authors lay out the bold educational agenda of Pierre Bourdieu by demonstrating that educational preparation must take into account larger socioeconomic political realities in order for educational change and reform to make an impact.
