Physics and Literature Aura Heydenreich, Klaus Mecke, 2021-12-20 Physics and Literature is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Advances in Sensors: Reviews, Vol. 7: Physical and Chemical Sensors: Design, Applications & Networks. Sergey Yurish, Karl Popper, *Science and Enlightenment* Nicholas Maxwell, 2017-09-26 Here is an idea that just might save the world It is that science properly understood provides us with the methodological key to the salvation of humanity A version of this idea can be found in the works of Karl Popper Famously Popper argued that science cannot verify theories but can only refute them and this is how science makes progress Scientists are forced to think up something better and it is this according to Popper that drives science forward But Nicholas Maxwell finds a flaw in this line of argument Physicists only ever accept theories that are unified theories that depict the same laws applying to the range of phenomena to which the theory applies even though many other empirically more successful disunified theories are always available This means that science makes a questionable assumption about the universe namely that all disunified theories are false Without some such presupposition as this the whole empirical method of science breaks down By proposing a new conception of scientific methodology which can be applied to all worthwhile human endeavours with problematic aims Maxwell argues for a revolution in academic inquiry to help humanity make progress towards a better more civilized and enlightened world
