

Internship Report

1 Introduction

The SWHi (Semantic Web for History) project is aimed at integrating, combining, and deducing information about early American history, based on the Early American Imprints, Series I: Evans, 1639-1800 collection, to assist general users or historians in exploring American history by using new technology offered by the Semantic Web. Although this project is initially limited to the historical domain, in the future its results can be applied to other domains and more heterogeneous resources.

This project is a cooperation between the Digital Library department of the University Library of Groningen and the Information Science department of the University of Groningen. The duration of this project is two years, from January 15, 2006 until January 15, 2008. The work is divided into three phases: identification, development, and releases. After each release, improvement cycles will be conducted.

I have worked in the identification and development phases. In this report I will explain my internship, the experiences I have gained, and a few things more.

1.1 Who?

For this internship, I have worked most closely with the following two persons.

1.1.1 Ismail Fahmi

Ismail is the main developer of the SWHi project. He has created the architecture of this project, e.g. the used tools and software. He is also a Phd student at the Alfa-Informatica department of the University of Groningen. He works for the University Library on Wednesday and Thursday, and sometimes also on Friday. I see him during these days. I have worked most closely with him on the SWHi project.
