

MEDICAL SCHOOL PERSONAL STATEMENT

Every day there are thousands of choices to be made, from what to wear to how our actions will affect our future career choices. I have always felt that each decision that I made contributes to my future in some way, and I believe that this can be strongly applied in the field of medicine. Each action that we take impacts us on a cellular level in some way. Whether that effect will result in aberrant pathologies is the reason I became interested in medicine. I am applying to medical school so that I can become a physician that understands the molecular basis of disease and use that knowledge to treat patients.

During my undergraduate studies, I have had the opportunity to experience both basic science research as well as translational projects, and this has given me significant bench-to-bedside experience. My first two years in the lab were spent studying how new chemotherapeutic drugs affected the growth of tumor cells in a dish, and assessing the molecular changes in these cells as they received the drug. The next two years, I worked with actual patient tissue, and validate my results through analysis of biopsies and tumor sections. This experience showed me the type of work I would like to complete in my future work as a physician.

Medical school will foster in me not only new knowledge, but new ideas as well. As I learn more about human anatomy and pathophysiology, I hope that new ideas will come to me regarding novel ways to diagnose and treat diseases. Additionally, the research opportunities that medical students engage in will give me considerable breadth in my education, allowing me to better understand the scientific basis behind medical phenomenon. Taken together, I believe the medical knowledge and research exposure I will gain as a medical student will enable me to be a more effective physician in the future.
