

Chapter 4 Outline: Sensation and Perception

Sensation is the stimulation of sense organs.

Perception is the selection, organization, and interpretation of sensory input.

Psychophysics: Basic Concepts and Issues

- **Psychophysics**: the study of how physical stimuli are translated into psychological experience

Thresholds: Looking for Limits

- **Stimulus**: sensation begins with this; any detectable input from the environment
- **Threshold**: a dividing point between energy levels that do and do not have a detectable effect
 - An **absolute threshold** for a specific type of sensory input is the minimum stimulus intensity that an organism can detect
- A **just noticeable difference (JND)** is the smallest difference in stimulus intensity that a specific sense can be detected.

Signal-Detection Theory

- **Signal-detection theory**: the detection of stimuli involves decision processes as well as sensory processes, both of which are influenced by a variety of factors besides stimuli intensity
- Four outcomes that are possible in detecting presence of weak signals:
 - **Hits**: detecting signals when they are present
 - **Misses**: failing to detect signals when they are present
 - **False alarms**: detecting signals when they are not present
 - **Correct rejections**: not detecting signals when they are absent
- **Detectability**: is measured in terms of probability and depends on decision-making processes as well as sensory processes

Perception Without Awareness

- **Subliminal Perception**: the registration of sensory input without conscious awareness (subliminal means below threshold)

Sensory Adaptation

- **Sensory Adaptation**: a gradual decline in sensitivity to prolonged stimulation

The Visual System: Essentials of Sight

The Stimulus: Light

- **Light**: a form of electromagnetic radiation that travels as a wave, moving, naturally enough, at the speed of light.
- Light varies in:
 - **Amplitude** (height; perception of brightness)
 - **Wavelength** (the distance between peaks; perception of color)
