Revisiting Metaphors in International Relations Theory Michael P. Marks, 2018-01-08 This book presents an analysis of how metaphors are essential elements in the study of international relations It acknowledges the fact that theory and practice in international relations often rest on common metaphorical concepts which have implications for the ways people around the world pursue their lives Because of the increased attention metaphors have received as integral elements in political discourse there is a need to investigate metaphorical concepts that are not neutral in their implications for understanding international relations Inasmuch as government policy is shaped by metaphorical concepts that originate in the academic realm and given that scholarly works are therefore partially involved in inspiring policy the author subjects a range of metaphors in international relations theory to critical interrogation

International Relations and Scientific Progress Patrick James, 2002 International Relations and Scientific Progress contends that a theory focusing on the structure of the international system explains a wider and more interesting range of events in world politics than other

theories Such theorizing appears to be out of favor as the result of the apparent failure by structural realism the most prominent system level theory over the last two decades on any number of fronts most notably an inability to anticipate the ending of the Cold War and its aftermath This new book is put forward as the most comprehensive and innovative theoretical work on paradigms in international relations since the publication of Theory of International Politics which created structural realism more than two decades ago With appropriate revisions however structural realist theory can compete effectively and reclaim its primacy The first part of International Relations and Scientific Progress assesses the meaning of progress in the discipline of international relations a process that culminates in the creation of a new concept the scientific research enterprise The second part reviews structural realism within that context and identifies a lack of connection between theory and research that links power based indicators to international conflict crisis and war This part of the book makes the case for an elaboration of structural realism by showing that a system level theory based on structure has great unrealized explanatory potential By comparison the current overwhelmingly research oriented agenda on state dyads imposes severe limitations on understanding that are not currently appreciated Part Three sums up the work and explores new directions most notably as related to empirical testing of an elaborated version of structural realism that focuses on both continuity and change in the international system
