Section: Pollution and Human Health

Read the passage below and answer the questions that follow.

We are exposed to small amounts of chemicals every day, in food, in the air we breathe, and sometimes in the water we drink. Almost any chemical can be harmful if taken in, or *ingested*, in large enough amounts. The question is whether the concentration of any particular chemical in the environment is high enough to be harmful.

To determine the effect of a pollutant on health, we need to know several things. We need to know how much of the pollutant is in the environment and how much gets into the body. Then we need to determine what concentration of the toxin damages the body. The amount of a harmful chemical to which a person is exposed is called the dose of that chemical. The damage to health that results is called the *response*.

Whether a chemical has a toxic effect depends in part on the dose. The response also depends on the number of times a person is exposed, the person's size, and how well the person's body breaks down the chemical.

IDENTIFYING MAIN IDEAS

One reading skill is the ability to identify the main idea of a passage. The main idea is the main focus or key idea. Frequently, a main idea is accompanied by supporting information that offers detailed facts about main ideas.

In the space provided, write the letter of the term or phrase that best completes each statement or best answers each question.

- _____ 1. How are people exposed to chemicals on a daily basis?
 - a. in the food they eat
 - b. in the air they breathe
 - c. in the water they drink
 - d. all of the above
- _____ 2. The amount of a harmful chemical to which a person is exposed is the
 - a. dose.
 - b. response.
 - c. pollutant.
 - d. toxin.
- _____ 3. Almost any chemical can be harmful if
 - a. it is present in the environment.
 - b. a person is exposed to it repeatedly.
 - c. it is ingested in large enough amounts.
 - d. a person has never been exposed to it before.
