Logistic Growth	Phase 1	An organism is introduced into a homogeneous environment containing limited resources	
	Phase 2	Population Growth	
	Phase 3	After carrying capacity of the environment is reached	

Lesson Summary

Describing Populations

Ecological Systems Most ecologists study populations. Ecologists study a particular community of living organisms, which usually are sharing environmental conditions for resources.

Change after Change They give us a population's size, density, or geographic range. A population's range includes any naturally occurring area. The population's distribution is its range. Ecologists ask the question, "How fast will the number of individuals in a population of this size be at any given time? The geographic range can grow or shrink over time.

Growth Rate The number of organisms in a population can change over time, or a population can. Population numbers can grow rapidly under conditions of high birth, death rate, and low death rate. Ecologists study the growth rate.
