Individual Differences: From Neurobiological Bases to New Insight on Approach and Avoidance Behavior Daniela Laricchiuta, 2016-01-22 The superordinate division of emotions is distributed along a bipolar dimension of affective valence from approaching rewarding situations to avoiding punitive situations Avoiding and approaching behaviors determine the disposition to the primary emotions of fear and attachment and the behavioral responses to the environmental stimuli of danger novelty and reward Approach or avoidance behaviors are associated with the brain pathways controlling cognitive and attentional function reward sensitivity and emotional expression involving prefrontal cortex amygdala striatum and cerebellum Individual differences in approach and avoidance behavior might be modulated by normal variance in the level of functioning of different neurotransmitter systems such as dopaminergic serotonergic noradrenergic and endocannabinoid systems as well as many peptides such as corticotropin releasing hormone These substances act at various central target areas to increase intensity of appetitive or defensive motivation Physiologically personality temperaments of approach and avoidance are viewed as instigators of propensity They produce immediate affective cognitive and behavioral inclinations in response to stimuli and orient individuals across domains and situations in a consistent fashion Although the action undoubtedly emerges directly from these temperamental proclivities ultimate behavioral outcomes are often a function of the integration among goal pursuit self regulation and temperament trait Defective coping strategies to aversive or rewarding stimuli characterize the patho physiology of anxiety and stress related disorders or compulsive and addiction behaviors respectively Individuals with neuropsychiatric symptoms such as depression suicidal behavior bipolar mania schizophrenia substance use disorders pathological gambling and anxiety disorders have scores which fall at the extreme tails of the normal distribution for a specific temperamental trait The present Research Topic on the individual differences in emotional and motivational processing emphasizes the link between neuronal pattern and behavioral expression The Topic includes experimental and clinical researches addressing the individual differences related to approach and avoidance and their behavioral characterization structural and neurochemical profiles synaptic connections and receptor expressions Studies are organized in a framework that puts in evidence the phenotypic expression and neurobiological patterns characterizing the individual differences and their biological variance

Avoiding Attack Graeme D. Ruxton, William L. Allen, Thomas N. Sherratt, Michael P. Speed, 2019-01-31 Avoiding Attack discusses the diversity of mechanisms by which prey avoid predator attacks and explores how such defensive mechanisms have evolved through natural selection It considers how potential prey avoid detection how they make themselves unprofitable to attack how they communicate this status and how other species have exploited these signals Using carefully selected examples of camouflage mimicry and warning signals

drawn from a wide range of species and ecosystems the authors summarise the latest research into these fascinating adaptations developing mathematical models where appropriate and making recommendations for future study This second edition has been extensively rewritten particularly in the application of modern genetic research techniques which have transformed our recent understanding of adaptations in evolutionary genomics and phylogenetics The book also employs a more integrated and systematic approach ensuring that each chapter has a broader focus on the evolutionary and ecological consequences of anti predator adaptation The field has grown and developed considerably over the last decade with an explosion of new research literature making this new edition timely

New Insights into High-Energy Processes on the Sun and Their Geospace Consequences Xiangliang Kong,Jing Liu,Gang Li,2025-02-21 The Sun releases an enormous amount of energy during explosive solar activities such as solar flares and coronal mass ejections The solar corona can be heated up to tens of millions of degrees and a large number of charged particles can be accelerated to nearly the speed of light Heated plasmas and high energy particles increase solar radiations across the whole electromagnetic spectrum from radio to gamma ray wavelengths which can have a profound effect on the Earth s upper atmosphere immediately after about eight minutes These create additional ionization and heating in the Earth s upper atmosphere leading to radio blackout GNSS signal interferences and tracking loss increased drag on spacecraft etc Recent studies have demonstrated that the effects can extend to the Earth s magnetosphere via electrodynamic coupling When the high energy particles propagate through the interplanetary medium and arrive at the vicinity of the Earth known as solar energetic particle SEP events they can pose hazardous radiation threats to astronauts and spacecraft electronics in space

The Wiley Handbook of Contextual Behavioral Science Robert D. Zettle,Steven C. Hayes,Dermot Barnes-Holmes,Anthony Biglan,2016-01-19 The Wiley Handbook of Contextual Behavioral Science describes the philosophical and empirical foundation of the contextual behavioral science movement it explores the history and goals of CBS explains its core analytic assumptions and describes Relational Frame Theory as a research and practice program This is the first thorough examination of the philosophy basic science applied science and applications of Contextual Behavioral Science Brings together the philosophical and empirical contributions that CBS is making to practical efforts to improve human wellbeing Organized and written in such a way that it can be read in its entirety or on a section by section basis allowing readers to choose how deeply they delve into CBS Extensive coverage of this wide ranging and complex area that encompasses both a rich basic experimental tradition and in depth clinical application of that experimental knowledge Looks at the development of RFT and its implications for alleviating human suffering

Innovations in Fishing Technology Aimed at Achieving Sustainable Fishing Alessandro Lucchetti,Valentina Melli,Jure Brčić,2023-11-20 Over the last fifty years

human exploitation of marine resources has become more efficient as the understanding of the habits and behaviour of the various species available in the sea gradually increased. Thus technologies have developed naturally over time and fishing gears and practices have become more sophisticated. These technical advances in fishing gear have generally led to more efficient economic fishing operations and better access to resources. However, fishing implies the harvesting of marine organisms directly from their natural environment; therefore, general awareness of environmental problems due to the exploitation of fishery resources has also increased. In particular, the poor selectivity of some gears is responsible for the capture of juveniles, immature and undersized specimens of many species, with negative consequences on the state of stocks. In addition, bycatch in marine fisheries is a major source of human-caused mortality of marine megafauna, often leading to the capture of vulnerable species. Finally, many bottom-towed gears are responsible for high impacts on bottom communities and habitats, with cascading consequences on the entire marine ecosystem. All these impacts can lead to changes in the structure, function and integrity of ecosystems, including effects on the food webs and multispecies predator-prey relationships.

Physiological Adaptations to Swimming in Fish Josep V. Planas, Arjan P. Palstra, Leonardo J. Magnoni, 2017-08-16

Swimming is an integral part of the life history of many fish species, as is intimately linked with their ability to express feeding and predator avoidance behaviors, habitat selection and environmental preferences, social and reproductive behaviors, as well as migratory behaviors. Therefore, swimming is an important determinant factor of fitness in a true Darwinian sense, and not surprisingly, swimming performance has been often used as a measure of physiological fitness in fish. The main aim of this Research Topic is to showcase some of the current studies designed to improve our understanding of the physiological, energetic and metabolic requirements of swimming and of the adaptive responses to swimming in fish. *Evolvability, Environments, Embodiment, & Emergence in Robotics*

John H. Long, Eric Aaron, Stéphane Doncieux, 2018-11-08. Embodied and evolving systems, biological or robotic, are interacting networks of structure, function, information and behavior.

Understanding these complex systems is the goal of the research presented in this book. We address different questions and hypotheses about four essential topics in complex systems: evolvability, environments, embodiment and emergence. Using a variety of approaches, we provide different perspectives on an overarching unifying question: How can embodied and evolutionary robotics illuminate 1) principles underlying biological evolving systems and 2) general analytical frameworks for studying embodied evolving systems? The answer: model biological processes to operate, develop and evolve situated embodied robots. Predicting and Managing Climate-Driven Range Shifts in Plants

Migration Hugh Dingle, 2014-07-17

Migration, broadly defined as directional movement to take advantage of spatially distributed resources, is a dramatic behaviour and an important component of many life histories that can contribute to the fundamental structuring of ecosystems. In recent years, our understanding of migration has advanced radically, with respect to both new data and conceptual understanding. It is now almost twenty years since

publication of the first edition and an authoritative and up to date sequel that provides a taxonomically comprehensive overview of the latest research is therefore timely The emphasis throughout this advanced textbook is on the definition and description of migratory behaviour its ecological outcomes for individuals populations and communities and how these outcomes lead to natural selection acting on the behaviour to cause its evolution It takes a truly integrative approach showing how comparisons across a diversity of organisms and biological disciplines can illuminate migratory life cycles their evolution and the relation of migration to other movements Migration The Biology of Life on the Move focuses on migration as a behavioural phenomenon with important ecological consequences for organisms as diverse as aphids butterflies birds and whales It is suitable for senior undergraduate and graduate level students taking courses in behaviour spatial ecology movement ecology and conservation It will also be of interest and use to a broader audience of professional ecologists and behaviourists seeking an authoritative overview of this rapidly expanding field
