WHAT IS A PROFILE ESSAY?

A piece of writing that examines the character of a person, their way of life, or unique experiences is called a profile essay. So, rather than thinking about how to start a profile essay, just understand the basics of sample profile essay writing. Profile Essays are complete, descriptive essays about the personal profile of someone.

It offers observations along with facts, providing insights into their personal and professional profile essay. In fact, a vibrant, engaging profile of a person essay mainly highlights the effect or contributions of their education. Additionally, profile essays highlight their special qualities and personal significance as the aim.

Analytical Profile of the Resin Spot Test Method Vladimir Grdinic, 2018-05-04 The working title of the book was The Detection of Analytes by the Resin Spot Tests Method Firstly we decided to sort out all published qualitative methods systematically against analytes We were not discouraged by the obstacles such as the study of a great number of papers published in Japanese the difficulty in locating especially older publications or the time required Still having in mind not to burden unnecessarily the volume of the book we dismissed the idea of systematically listing all the procedures in detail Nevertheless a relatively large number of them found a place in the book and perhaps this will contribute to the stirring of spontaneous interest in this technique in the ranks of applied chemists and others who a priori shun the technique *The pain profile in fibromyalgia* Karin Wåhlén, 2020-11-04 Chronic widespread pain CWP including fibromyalgia FM is a complex pain condition where little is known about the molecular mechanisms contributing to its pathophysiology To date there are no established biomarkers for CWP FM This thesis has investigated potential molecular mechanisms and biomarkers in blood for chronic pain in women with CWP FM Furthermore investigations are made to evaluate whether common pain characteristics such as pain intensity sensitivity and psychological distress in CWP FM are correlated with specific proteins in blood The pain profile of CWP FM which includes the plasma proteome and clinical characteristics is analyzed using proteomics advanced multivariate statistics and bioinformatics The results from paper I III and IV indicate that there are prominent systemic changes related to immunity inflammation and metabolic processes in women with CWP FM compared to healthy controls Furthermore paper II and III show that in CWP FM pain intensity is related to protein profiles involved in immunity processes psychological distress with metabolic and immunity processes and pain sensitivity with inflammatory processes In paper IV the plasma proteome is investigated before and after a 15 weeks resistance exercise intervention in FM and healthy controls Both at baseline and post exercise in FM and controls prominent protein alterations are found that are involved in immunity stress mRNA stability and muscle structure development Exercise seems to influence clinical characteristics and circulating proteins in FM Furthermore specific plasma proteome profile is found related to grade of chronification pain sensitivity and improved muscle force of the quadriceps muscle To summarize the results from this thesis suggest that in CWP FM there might be a dysregulation in the biological processes involved in the immune system and metabolic processes which are tightly linked to several proteins in the complement system and blood coagulation cascade These results shed light on potential ongoing mechanisms involved in the pathophysiology of the complex pain condition CWP FM This type of biomarker research has a large potential in increasing knowledge about mechanisms involved in CWP FM and can hereby open for better clinical understanding and management of this and other chronic pain states The clinical value of collecting a blood sample and measuring stable pain mechanism markers in combination with evaluation of anamnesis and clinical examination would in the future help clinicians and patients receive a faster and more precise

diagnosis and ultimately better treatment strategies. Långvarig smärta har blivit vanligare bland befolkningen och är idag ett stort hälsoproblem. Ca 1 av 10 drabbas av generaliserad smärta, engelska chronic widespread pain (CWP), dvs smärta spridd över hela kroppen. Fibromyalgi (FM) som ingår i CWP drabbar ca 1-4% av befolkningen och är vanligare bland kvinnor än män. Det är vanligt att personer med CWP/FM utöver sin spridda smärta även upplever trötthet, sömnsvårigheter, depression, nedsatt smärtnöjslighet och stelhet av muskler och leder. Symtomen har i sin tur stor påverkan på arbetsförmåga, hälsa och livskvalitet. Idag är de bakomliggande orsakerna för CWP/FM ofullständigt kartlagda och det finns inga markörer som på ett objektivt sätt kan fastställa diagnosen. Syftet med denna avhandling är att undersöka hur proteiner i blod skiljer sig åt mellan kvinnor med CWP/FM och friska kvinnliga kontroller. Vidare har syftet varit att undersöka om kliniska variabler, till exempel smärteintensitet, smärtnöjslighet och psykologisk belastning, nedsatt depression har ett samband med proteinmängder i blod. Slutligen har effekten av ett 15 veckors träningsprogram och dess påverkan på proteiner i blod samt kliniska variabler hos kvinnor med FM och friska kontroller analyserats. I studie I, III och IV studerades proteinmängderna i blod mellan CWP/FM och kontroller. Resultatet visade att flertalet proteiner kunde urskilja CWP/FM gruppen från kontrollerna. Dessa proteiner var involverade i flertalet funktioner i kroppen, bland annat inflammation, metabolism och immunförsvar. I studie II och III undersöktes om det funna proteinmängderna i blod hade något samband med smärteintensitet, smärtnöjslighet och psykologisk belastning hos denna specifika CWP/FM-grupp. Resultatet visade att det fanns ett specifikt proteinmängd-kopplat till respektive undersökt variabel. Smärteintensitet var relaterat till proteiner involverade i immunförsvar, smärtnöjslighet var relaterat till proteiner inom inflammation och psykologisk belastning var relaterat till proteiner inom metabolism och immunförsvar. I studie IV studerades proteinmängderna i blod före och efter 15 veckors styrketräning hos FM samt friska kontroller. Resultatet visade att det fanns förändringar i specifika proteiner involverade i flertalet funktioner i kroppen, bland annat stressprocesser för muskelstrukturutveckling samt immunförsvar. Vidare sågs även ett specifikt mängd av proteiner som kunde relateras till smärtans varaktighet, dvs hur länge man levde med smärta, smärtnöjslighet samt förbättrad muskelstyrka i lårmuskeln. Styrketräning visade sig ha en positiv effekt på flera av de rapporterade symtomen hos FM-gruppen och till viss del påverkades även proteinmängderna. Sammanfattningsvis har studierna i denna avhandling visat att i denna specifika CWP/FM-grupp finns skillnader i proteinmängderna i blod jämfört med friska kontroller. Det funna proteinmängderna är förstås involverat i olika funktioner inom blodkoagulation samt olika komponenter kopplade till immunförsvaret. Genom identifieringen av dessa specifika proteinmängder i blodet hos CWP/FM kan det bidra till ökad förståelse av bakomliggande sjukdomsmekanismer hos denna patientgrupp. Detta kan i framtiden bidra till underlättandet av diagnostisering, behandling, rehabilitering och slutligen skapa kliniska verktyg i form av smärtemarkörer vid utredning av olika långvariga smärttillstånd.
