Abstract

Discussion is mainly the section in a research paper that makes the readers understand the exact meaning of the results achieved in a study by exploring the significant points of the research, its implications in different areas of the study, and the improvements that the study can make for future developments. However, it is commonly challenging for researchers to realize what should be covered in the discussion section of a research paper and how to write it to ensure it helps to sell the research paper to the audience. The main aim of this article is to provide information on writing the discussion section appropriately in a research paper. For doing this, more details about the purpose of writing a discussion in an academic research project are provided and differences between discussion and introduction are clarified. Then, the important points that need to be considered or avoided in a standard discussion section are discussed.

What Does Discussion Mean in a Research Paper?

In a research paper, the hypothesis, the purpose, and the design of the study should be regarded initially. You need also describe your research methods, collect data, analyze them and then obtain the results. Now, you are ready to add the discussion section with the aim of providing more effective implications about your study (based on the results) and achieving the real meaning of your result.

Generally, this section includes an evaluation and interpretation of your result as well as the differences between them and your written hypothesis discussed in the initial parts of your paper. However, the critical point to consider is thinking about this section at the beginning of the research process, even though it comes at

the end of the paper. For this purpose, you should design specific questions based on the outset of your study. These questions should be developed based on the following:

- The importance of the study
- The relationship between the study and previous similar ones
- The limitations of the design of the study [3].

It can be also noted that, in some other kinds of papers, for example reaction papers or essays, discussion section is used to gain a summary about the main points of the research paper together

Sample Survey Theory Paul Kottnerus, 2012-11-12 This volume deals primarily with the classical question of how to draw conclusions about the population mean of a variable given a sample with observations on that variable Another classical question is how to use prior knowledge of an economic or definitional relationship between the population means of several variables provided that the variables are observed in a sample The present volume is a compilation of two discussion papers and some additional notes on these two basic questions The discussion papers and notes were prepared for a 15 hour course at Statistics Netherlands in Voorburg in February 2000 The first discussion paper is entitled A Memoir on Sampling and the Generalized Intrasample Correlation Coefficient 1999 It describes a new approach to the problem of unequal probability sampling The second discussion paper The General Restriction Estimator 2000 deals with the problem of how to find constrained estimators that obey a given set of restrictions imposed on the parameters to be estimated Parts I and II of the volume provide a novel and systematic treatment of sampling theory considered from the angle of the sampling autocorrelation coefficient ρ The same concept plays an important role in the analysis of time series Although this concept is also well known in sampling theory for instance in cluster sampling and systematic sampling generalizations of ρ for an arbitrary sampling design are to my knowledge not readily found in the literature
