Science Spectrum Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2003-03 *The Development of the Periodic Law* Francis Preston Venable, 1896 On the Discovery of the Periodic Law John A. R. Newlands, 1884 By the English chemist whose work on the atomic weights of the elements anticipated the periodic table of Mendeleev and who predicted the element germanium before its discovery by the latter **Mendeleev on the Periodic Law** Dmitri Ivanovich Mendeleev, 2013-04-25 By the dawn of the nineteenth century elements had been defined as basic building blocks of nature resistant to decomposition by chemical means In 1869 the Russian chemist Dmitri Ivanovich Mendeleev organized the discord of the elements into the periodic table assigning each element to a row with each row corresponding to an elemental category The underlying order of matter hitherto only dimly perceived was suddenly clearly revealed This is the first English language collection of Mendeleev's most important writings on the periodic law Thirteen papers and essays divided into three groups reflect the period corresponding to the initial establishment of the periodic law three papers 1869-71 a period of priority disputes and experimental confirmations five papers 1871-86 and a final period of general acceptance for the law and increasing international recognition for Mendeleev five papers 1887-1905 A single easily accessible source for Mendeleev's principle papers this volume offers a history of the development of the periodic law written by the law's own founder **Te HS&T J** Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2004-02 *Te HS&T a* Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2004-02 *The Development of the Periodic Law* Francis Preston Venable, 1974

On the Discovery of the Periodic Law, and on Relations Among the Atomic Weights John A. R. Newlands, 1884

The Development of the Periodic Law Francis Preston Venable, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1896 edition Excerpt it is obvious that Prout's law or some modification of it such as was many years ago suggested by Dumas must be true the atomic weights of all the other so called elements must be multiples of that of hydrogen or multiples of that fraction of the hydrogen atom which may result from the dissociation of this body itself If such fraction be very small as compared with the effect of the inevitable errors of experiment the experimental verification or refutation of the law will prove impossible but if it be considerable as for instance onehalf of the commonly known hydrogen atom or onefourth as assumed by Dumas the question admits of practical examination The author further questioned the justice of the view taken by Stas of his results that Prout's law is disproved by them or is not supported by them The careful work of Stas and others only proves by close agreement of the results that fortuitous errors have been reduced within narrow limits It does not prove that all sources of constant error have been avoided and indeed this can never be absolutely proved as we never can be sure that our knowledge of the substances we are dealing with is complete He added that of course one

distinct exception to the assumed law would disprove it if that exception were itself fully proved but this is not the case Out of the eighteen best known atomic weights ten approximate to integers within a range of variation less than one tenth of a unit The degree of probability that this is purely accidental is found to be only equal to $1/10978$ This seems to illustrate the point that not only is Prout's law not as yet absolutely overturned but that a heavy and

The Development of the Periodic Law (Classic Reprint) Francis Preston Venable, 2015-07-20 Excerpt from The Development of the Periodic Law This work is intended as a study of the development of the natural law underlying the relations of the elements and their properties to one another It is to be used for purposes of reference and of study and not as a mere history of the subject The errors and repetitions of the writers upon this subject in the past few years have abundantly proved the necessity for some such gathering and systematizing of the work of former years It is in the main an out of the way sort of literature and the difficulty of gathering it increases with the lapse of time The growing interest in this natural law speaks well for the progress of the science in the future More and more it is becoming recognized as the basis of the science and the hope of the solution of some of the greatest problems which the chemist has to face seems to lie in it The reproach that chemistry is not in the fullest sense a science will continue just so long as chemists content themselves with raking together the straws of facts gleaners many of them in a harvested field and neglect the weightier matters of the law The gathering of facts is good gleanings is good but

contentment with such gains means stagnation The task has been undertaken in the hope of arousing interest in this matter and of aiding in the further development of the still incomplete system No excuses are offered for the imperfections of the work It could not be other than imperfect About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
