From Animals to Animats 11 Stephane Doncieux,Benoit Girard,Agnes Guillot,John Hallam,Jean-Arcady Meyer,Jean-Baptiste Mouret,2010-08-11 [Intelligent Behavior in Animals and Robots](#) David McFarland,Tom Bösner,1993 This exciting study explores the novel insight based on well established ethological principles that animals humans and autonomous robots can all be analyzed as multi task autonomous control systems

Intrinsic motivations and open-ended development in animals, humans, and robots Gianluca Baldassarre,Tom Stafford, Marco Mirolli,Peter Redgrave,Richard Michael Ryan,Andrew Barto,2015-02-10 The aim of this Research Topic for Frontiers in Psychology under the section of Cognitive Science and Frontiers in Neurorobotics is to present state of the art research whether theoretical empirical or computational investigations on open ended development driven by intrinsic motivations The topic will address questions such as How do motivations drive learning How are complex skills built up from a foundation of simpler competencies What are the neural and computational bases for intrinsically motivated learning What is the contribution of intrinsic motivations to wider cognition Autonomous development and lifelong open ended learning are hallmarks of intelligence Higher mammals and especially humans engage in activities that do not appear to directly serve the goals of survival reproduction or material advantage Rather a large part of their activity is intrinsically motivated behavior driven by curiosity play interest in novel stimuli and surprising events autonomous goal setting and the pleasure of acquiring new competencies This allows the cumulative acquisition of knowledge and skills that can later be used to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans artistic creativity scientific discovery and subjective well being owe much to them The study of intrinsically motivated behavior has a long history in psychological and ethological research which is now being reinvigorated by perspectives from neuroscience artificial intelligence and computer science For example recent neuroscientific research is discovering how neuromodulators like dopamine and noradrenaline relate not only to extrinsic rewards but also to novel and surprising events how brain areas such as the superior colliculus and the hippocampus are involved in the perception and processing of events novel stimuli and novel associations of stimuli and how violations of predictions and expectations influence learning and motivation Computational approaches are characterizing the space of possible reinforcement learning algorithms and their augmentation by intrinsic reinforcements of different kinds Research in robotics and machine learning is yielding systems with increasing autonomy and capacity for self improvement artificial systems with motivations that are similar to those of real organisms and support prolonged autonomous learning Computational research on intrinsic motivation is being complemented by and closely interacting with research that aims to build hierarchical architectures capable of acquiring storing and exploiting the knowledge and skills acquired through intrinsically motivated learning Now is an important moment in the study of intrinsically motivated open ended development requiring contributions and integration across a large number of fields within the cognitive sciences This

Research Topic aims to contribute to this effort by welcoming papers carried out with ethological psychological neuroscientific and computational approaches as well as research that cuts across disciplines and approaches

Children and Companion Animals: Psychosocial, Medical, and Neurobiological Implications Andrea M. Beetz, Lynette A. Hart, Brinda I. Jegatheesan, Naoko Koda, 2018-08-16 Children and companion animals seem to have a natural affinity towards each other Most children desire a relationship with their own companion animals or at least demonstrate an interest to interact with animals in general Living with companion animals or interacting with animals may have psychosocial neurobiological or medically relevant effects on typically developing children and juveniles as well as those with diverse and special needs In this eBook we present several articles addressing the relationships between children juveniles and animals in different countries including Austria Germany Jamaica Japan the United Kingdom and the United States Three articles discuss approaches in animal assisted education including animal keeping and animal assisted interventions in schools and an experimental study investigating immediate effects of dogs on reading competence and accompanying stress reactions with cortisol and behavior Other articles address topics involving children and their companion animals including dog walking by children and juveniles risks of dog bites by the family dog selection of pet dogs for families with a child with autism spectrum disorder ASD and the relationships that children with ASD have with their family cats The interactions between children juveniles and animals addressed in this eBook provide new insights into some scarcely investigated themes and underline the significance of animals in children s lives

Metrics of Sensory Motor Coordination and Integration in Robots and Animals Fabio Bonsignorio,Elena Messina,Angel P. del Pobil,John Hallam,2019-03-23 This book focuses on a critical issue in the study of physical agents whether natural or artificial the quantitative modelling of sensory motor coordination Adopting a novel approach it defines a common scientific framework for both the intelligent systems designed by engineers and those that have evolved naturally As such it contributes to the widespread adoption of a rigorous quantitative and refutable approach in the scientific study of embodied intelligence and cognition More than 70 years after Norbert Wiener s famous book *Cybernetics or Control and Communication in the Animal and the Machine* 1948 robotics AI and life sciences seem to be converging towards a common model of what we can call the science of embodied intelligent cognitive agents This book is interesting for an interdisciplinary community of researchers technologists and entrepreneurs working at the frontiers of robotics and AI neuroscience and general life and brain sciences

Play and Learning in Early Childhood Settings Ingrid Pramling Samuelsson,Marilyn Fleer,2008-11-14 This book represents the outcome of the joint activities of a group of scholars who were concerned about the lack of international research in play for children from birth to 3 years The authors are members of the Organisation Mondiale pour l Education Prescolaire OMEP For further information see <http://www.om-ong.net> The idea of carrying out a research project internationally was born at the OMEP s World Congress in Melbourne Australia 2004 All member countries were invited and 10 countries decided to participate of which three have withdrawn during the process The reason for this might be that in these countries only one person was working with the project while other seven countries have been working in a team of two or more persons The countries that have carried out research and contributed to this book with a chapter each are Australia Chile China Japan New Zealand Sweden and USA Wisconsin For more information about the participating countries and their corresponding addresses see Appendix I This book project started in Melbourne with a discussion about what is general in early childhood education globally and what is culturally specific The discussion was inspired by one of the keynote speakers Nazhat Shameem 2004 judge in the supreme court in Fiji when she said If we all think we are so different and specific in each culture the role of human rights has no value anymore We formulated three questions
