Intelligent Notification Systems Abhinav Mehrotra, Mirco Musolesi, 2022-06-01 Notifications provide a unique mechanism for increasing the effectiveness of real time information delivery systems. However, notifications that demand users' attention at inopportune moments are more likely to have adverse effects and might become a cause of potential disruption rather than proving beneficial to users. In order to address these challenges, a variety of intelligent notification mechanisms based on monitoring and learning users' behavior have been proposed. The goal of such mechanisms is maximizing users' receptivity to the delivered information by automatically inferring the right time and the right context for sending a certain type of information. This book presents an overview of the current state of the art in the area of intelligent notification mechanisms that rely on the awareness of users' context and preferences. We first present a survey of studies focusing on understanding and modeling users' interruptibility and receptivity to notifications from desktops and mobile devices. Then we discuss the existing challenges and opportunities in developing mechanisms for intelligent notification systems in a variety of application scenarios.

User Acceptance of Mobile Notifications Tilo Westermann, 2018-07-29 This book presents an alternative approach to studying smartphone app user notifications. It starts with insights into user acceptance of mobile notifications in order to provide tools to support users in managing these. It extends previous research by investigating factors that influence users' perception of notifications and proposes tools addressing the shortcomings of current systems. It presents a technical framework and testbed as an approach for evaluating the usage of mobile applications and notifications and then discusses a series of studies based on this framework that investigate factors influencing users' perceptions of mobile notifications. Lastly, a set of design guidelines for the usage of mobile notifications is derived that can be employed to support users in handling notifications on smartphones.
